WELCOME

Bienvenue à Sfécologie2016, bienvenue à Marseille

Chers tous,

C'est un très grand plaisir pour la Société Française d'Ecologie de vous accueillir pour son congrès 2016 au cœur du vieux Marseille dans ce merveilleux cadre du Palais du Pharo. L'équipe de l'Institut Méditerranéen de Biodiversité & d'Ecologie (IMBE) a relevé le défi que constitue l'organisation d'un tel rassemblement avec grand talent et enthousiasme.

Nos collègues Marseillais et leur comité scientifique nous ont préparé un très beau programme de symposiums et de sessions regroupant plus de 800 présentations orales ou affichées, qui devrait satisfaire les appétits les plus voraces.

Viennent s'y ajouter, en amont, des journées à thèmes comme la journée sur les invasions biologiques et l'écologie chimique, et en post-congrès des sorties à caractère dans des haut-lieux naturels culturels et scientifiques de la Provence dont la réputation n'est plus à faire. Pour couronner le tout, ils vous invitent à une soirée partagée avec le grand public et intitulée « regards croisés », qui ne peut qu'exciter nos neurones. En effet, Pierre Henry Gouyon nous parlera « du bon usage de la Nature : l'écologie entre science et politique » et Christophe Bonneuil lui fera écho en discutant, lui, « du bon usage de la Science : l'écologie entre nature et politique ».

Mais bien sûr, ce congrès c'est aussi pour nous l'occasion de nous retrouver pour passer des rencontres virtuelles de notre quotidien au plaisir de nous retrouver et de nous côtoyer pour échanger dans une atmosphère chaleureuse et conviviale.

C'est pour nous l'occasion de parler science, découvertes et projets, l'occasion aussi de resserrer les liens entre membres de notre société savante. C'est aussi l'occasion d'encourager ceux qui ne l'ont pas encore fait de nous rejoindre¹ pour dessiner ensemble la Société Française d'Ecologie de demain et sa contribution à une société où l'écologie scientifique doit jouer un rôle plus important dans la compréhension et le respect de la nature et de ses limites.

Enfin, la SFE tient à remercier tous ceux qui ont permis la réalisation matérielle de cette rencontre par leur soutien financier et leur travail (comité d'organisation local et comité scientifique).

Vive Sfécologie2016 à Marseille et nous vous donnons d'ores et déjà rendez-vous pour Sfécologie2018 à Rennes !

Jean-Louis Martin, Christophe Thebaud et Sébastien Barot

Président et vice-présidents de la Société Française d'Ecologie

Welcome to Sfécologie2016, welcome to Marseille

Dear all,

It is a great pleasure for the Société Française d'Ecologie to welcome you in Marseille for our Sfécologie2016 conference held in wonderful setting of the Pharo palace at the heart of historic Marseille.

The IMBE team took up, with great talent and enthusiasm, the challenging task of organizing such a gathering. Our colleagues from Marseille and the scientific committee have prepared an exciting program of symposia and sessions totalling over 800 oral or posted contributions. This should satisfy the wildest appetites.

It will be completed, ahead of the Congress, by special day long sessions such as the one on biological invasions, and after the Congress by field trips to some of the most renowned sites of Provence.

Finally they invite us to an evening session shared with the general public for two complementary and stimulating perspectives on the role of ecological science in society. Pierre Henry Gouyon will talk about the "Good use of Nature : ecology between science and politics" and Christophe Bonneuil will explore the "Good use of Politics: Ecology between Nature and Politics"(these talks will be given in French).

But, of course, this conference is also a wonderful opportunity to meet in the flesh, to enjoy being together and exchange in a convivial and warm atmosphere.

It is a fantastic opportunity to talk science, discoveries and projects, an opportunity to tighten the links among members of the Society. It is also a special moment to encourage other participants to join our Society to help continue shape a Société Française d'Ecologie that contributes to a society in which ecology plays an important role in the comprehension and the respect of Nature and its limits.

In closing, the SFE would like to thank all those that helped in making this Congress happen and especially the different sponsors and the organizing and scientific committees.

Long Live Sfécologie2016 in Marseille and looking forward to Sfécologie2018 in Rennes.

Jean-Louis MARTIN

President of the Société
Française d'Ecologie

Christophe THEBAUD

Vers une écologie scientifique épanouie et concernée

L'écologie est avant tout une discipline scientifique, avec ses corpus théorique et méthodologique, ses spécialités et ses grands principes sans cesse revisités.

En ce sens, elle ne diffère pas des autres disciplines et génère de plus en plus de publications de haut niveau, qui vont des considérations les plus fondamentales jusqu'aux aspects très appliqués.

L'écologie peut être très théorique, et il est même indispensable d'avoir une production forte dans ce domaine, mais elle peut et doit être aussi très appliquée.

Dans le contexte actuel, les applications potentielles de l'écologie sont devenues de plus en plus nombreuses et de plus en plus urgentes. En effet, avec comme objet d'étude préférentiel « les interactions » au sens large, l'écologie apparaît comme LA science de la biodiversité, au delà des connaissances qu'elle produit dans la compréhension de la mise en place et de la dynamique du vivant, elle est en capacité de fournir les bases nécessaires à la préservation de cette biodiversité et le cadre pour le suivi de l'efficacité des modes de gestion de cette ressource essentielle.

Parallèlement, en s'orientant vers une dimension véritablement intégrative, voire globale, l'écologie a les moyens de se positionner désormais comme LA science du développement durable et, à en ce début de XXIème siècle, force est de reconnaître qu'elle est amenée à prendre une tout autre dimension, à jouer un rôle primordial pour la planète et surtout pour le bien être humain.

C'est donc avec un réel plaisir et un fort enthousiasme que l'IMBE a relevé le défi d'organiser ces journées de l'écologie scientifique, pour lesquelles l'ensemble des personnels, et plus particulièrement les organisateurs, se sont investis sans compter depuis 2 ans.

Thierry Tatoni

Directeur de l'IMBE

Towards a fulfilling and relevant scientific ecology

Ecology is first of all a scientific discipline, with its body of theories and methods, and a constant renewal of its main specific fields and principles. In that regard, Ecology is not different from the other scientific disciplines and produces an increasing number of outstanding publications on both fundamental and applied grounds.

Ecology can produce highly theoretical works, which is essential, but Ecology can be -and even more- must be an applied science. Currently, practical applications of Ecology for the benefits of our societies have become more numerous and increasingly urgent. 'Interactions', sensu lato, are at the very heart of Ecology which makes it by definition THE science of Biodiversity. Beyond the knowledge of how Life has appeared and developed, Ecology can provide the basis for the preservation of Biodiversity and ensure its management is relevant and efficient into the future.

By being more integrative and global, Ecology could establish itself as the cornerstone of sustainable development. In this beginning of the 21st century, the influence of Ecology will inevitably grow and play a key role for Planet Earth and human well-being.

Sfécologie2016, an International Conference on ecological sciences would not have taken place without 2 years of hard work from the staff of my Institute (IMBE).

That is thus with a real pleasure that we welcome you today in Marseille.

Thierry TATONI
IMBE Director

Bonjour et bienvenue à Sfécologie2016 !

Sfécologie 2016, voilà nous y sommes... Enfin presque. Au moment d'écrire ces lignes, la dernière ligne droite est engagée et il nous tarde d'assister à la première conférence plénière ouvrant notre, ou plutôt votre Conférence Internationale Sfécologie.

Nous avons tout mis en œuvre pour que cet évènement soit à la hauteur des attentes de toutes et tous, à commencer par la Société Française d'Ecologie. Nous avons tenu à rendre cette conférence accessible à tous, en gardant des tarifs modérés et pour cela l'organisation de la conférence a entièrement reposé sur les forces vives de notre institut, l'IMBE, et aucune mission n'a été sous-traitée. Cela a constitué un véritable défi pour nous depuis maintenant près de deux ans, et engendré quelques «galères»... d'autant plus que nous tenions également à maintenir un niveau d'exigence élevé en termes de prestations. Nous sommes aujourd'hui heureux d'avoir respecté ce principe.

Outre la production «écologique» (forcément !) et «locale» de cette conférence, nous avons également veillé à la parité homme-femme, chimère souvent recherchée mais rarement atteinte dans nos disciplines scientifiques. Pour vous en assurer, jetez un œil au trombinoscope de notre comité d'organisation, mais aussi aux conférences plénieress, au comité scientifique, ou encore aux président(e)s des sessions auxquelles vous allez assister.

Profitons de cette tribune pour remercier chaleureusement chacun des membres de notre comité d'organisation ainsi que l'ensemble de nos soutiens scientifiques et financiers, sans qui cette aventure n'aurait pas été possible. Et nous remercions aussi toutes celles et ceux qui vont présenter leurs travaux de recherche lors de cette conférence. Avec Sfécologie2018, qui se tiendra à Rennes, faisons en sorte que cette conférence bisannuelle s'impose comme une évidence dans le calendrier de notre communauté.

En vous souhaitant une très bonne conférence, allons sans plus tarder assister aux quelques 900 communications scientifiques qui jalonnent ces trois journées !

Cécile Albert & Alexandre Millon

Présidente et vice-président du comité d'organisation

Hello and welcome to Sfécologie2016!

Here we are, Sfécologie2016... well almost! While writing these lines, we are still in the rush for sorting out the last minute issues and we are (desperately) looking forward to attending the first plenary conference opening our, well rather your Sfécologie International Conference.

We did our best over the last two years to reach the expectations of the whole scientific community in ecology and in particular those of the Société Française d'Ecologie. Our main objective was to make this conference financially accessible to all. To achieve this, we took fully advantage of the skills of colleagues working in our institute, IMBE (Institut Méditerranéen Biodiversité & Ecologie). And we did not outsource a single task... This has been quite of a challenge! But we are happy to have reached this objective.

Besides this, we paid a particular attention to gender balance. Have a look at the plenary speakers, at the composition of both the scientific and organization committees, at the chair(wo)men list, and see if you agree on this often stated – but rarely achieved - issue.

Eventually, this space is an opportunity for us to warmly thank all the people, either closely or loosely involved in the organization of this conference, as well as our partners and funding bodies. We also thank all the people who will present their work during Sfécologie2016.

We hope that with Sfécologie 2016 in Marseille and Sfécologie 2018 in Rennes, the bi-annual international conference of the Société Française d'Ecologie will become a recurrent event in the agenda of our scientific community.

Now, we just have to wish you a very pleasant conference, and let you go wandering around the Palais du Pharo to take your best of the almost 900 communications (either oral or poster) over these three days.

MAP LEVEL 1 (PALAIS HISTORIQUE)

B Map level 1 (Palais Historique)

PLENARY SPEAKERS

E.J. MILNER-GULLAND

E.J. Milner-Gulland is Tasso Leventis Professor of Biodiversity in the Department of Zoology, University of Oxford, and leads the Interdisciplinary Centre for Conservation Science. Her research falls within three broad themes: Motivations of natural resource users; social-ecological system dynamics; management of natural resource use.

The first theme addresses the drivers of human behaviour, the second the feedbacks between behaviour and system dynamics, and the third the effects of interventions designed to alter behaviour and hence slow the rate of biodiversity loss.

She has a particular interest in the conservation ecology of the saiga antelope in Central Asia, the sustainable use of wild resources such as bushmeat, evaluating the social impacts of conservation, and improving the effectiveness of incentive-based mechanisms such as PES and biodiversity offsetting in the marine and terrestrial realms.

Understanding motivations as the key to addressing the illegal international trade in wildlife

The illegal international trade in wildlife is now of major concern to governments as well as conservationists, with 46 governments signing up to the 2014 London Declaration committing to tackle the issue at the highest level. Disrupting the criminal trade networks through which wildlife flows is critical to reducing the flow of illegal wildlife, and is the province of law enforcement agencies. However, at each end of the chain are individuals whose actions may be influenceable by conservationists, whose motivations for hunting or consuming wildlife products need to be understood in order for interventions to be successful. In this talk I highlight new research, using methods from behavioural economics and marketing, which aims to tease apart the factors driving behaviour, and explore ways to change it. My first case study comes from Uganda, where we use indirect questioning methods, choice experiments and scenario analyses to explore the reasons behind decisions to hunt in protected areas. Here, bushmeat for local sale is the primary commodity, and products destined for international markets (like ivory) are generally opportunistic byproducts. Promising interventions to change behaviour include diverting existing benefit-sharing funding towards human-wildlife conflict mitigation. At the other end of the chain, consumers in south-east Asia have diverse relationships with wildlife products, including as medicine and status symbols. Using a case study of ivory and rhino horn in Viet Nam, we explore how people relate to wildlife products as luxury goods, their emotional attachment to horn and ivory compared to other luxury products. In our sample, horn and ivory are viewed mostly with indifference and associated with wealth and men. I suggest how these approaches to exploring motivations can support the development of effective, well-targeted conservation interventions.

Anna TRAVESET

Anna Traveset is a research professor based at the Mediterranean Institute of Advanced Studies (CSIC-UIB). Her research involves the study of plant-animal interactions in terrestrial ecosystems, especially island ecosystems. She works in different archipelagos, including the Balearics, the Canaries and the Galapagos, and is lately focused on the impacts of different types of disturbances on mutualistic interactions, specifically pollination and seed dispersal.

Biological invasions are currently one of the main threats to natural systems, particularly on islands, and their negative impact is amplified under the scenario of global change and globalization that our planet is experiencing. Ecologists have begun only in the last decade to evaluate the role of mutualisms in the structure of communities as well as the fragility of many mutualistic interactions. Specifically, the impacts of invasive species on native mutualisms are still poorly documented, although the data available so far indicate that they are very relevant and that they should be considered in any habitat restoration program.

In her talk, she will highlight the importance of incorporating positive interactions in the study of biological invasions and in the evaluation of their ecological and evolutionary impacts. She will show how the framework of complex ecological networks can help us understanding the mechanisms of alien species integration in the native communities as well as predicting species and interaction losses that might even lead to an extinction cascade in the invaded communities.

Mutualisms: drivers, and in turn victims, of biological invasions

Mutualistic interactions play an important role maintaining biodiversity, structuring ecosystems and mediating their functioning. Such positive interactions, however, have begun to receive much attention relative to negative ones (e.g. competition, predation) only in the last decade. The persistence of many mutualisms is increasingly threatened by different drivers of global change, with still unknown ecological and evolutionary consequences. Particularly, the impacts of alien invasive species on native mutualisms are still poorly documented, although the data available so far indicate that they may be highly relevant, often leading to population declines, reduced biodiversity, and altered ecosystem functioning. In turn, positive interactions enhance the invasion of many alien species.

In my talk, I will go through the different mechanisms whereby mutualisms mediate invasions and are in turn influenced by invasions. I will focus on two main types of mutualisms (pollination and seed dispersal) and draw on examples mostly from Mediterranean ecosystems, and from both species and community - level studies, that show the possible demographic and genetic impacts of alien invasive species on native ones as well as the relevance of incorporating positive interactions in the study of biological invasions. I will also show how ecological networks provide a useful framework for predicting tipping points for community collapse in response to invasions and other synergistic drivers of global change.

Purificación LOPEZ-GARCIA

Purificación Lopez-Garcia, Director of Research at the CNRS, is the leader of the team Ecologie Systématique Evolution, CNRS, Université Paris-Sud, Université Paris-Saclay, AgroParisTech, in Orsay.

Her centers of interest focus on the diversity, ecology and evolution of microorganisms belonging to the three domains of life (archaea, bacteria, eukaryotes).

Microbial life through the lens of molecules

The seminal discovery that evolutionary information can be retrieved from the monomer sequence of biological macromolecules had a profound impact in biology. One of the most immediate and powerful applications was the possibility to establish a natural classification of all organisms by using the information contained in universal conserved gene markers. Carl Woese successfully developed this approach using small subunit (SSU) rRNA molecules as universal identity markers and leading to establish the first universal molecular phylogenetic trees (with the incidental discovery of the archaea). This so-called 'Woesian' revolution soon paved the way to yet another revolution, that of environmental microbiology. Microbiologists knew that only a tiny fraction of the microbial diversity in natural ecosystems was amenable to culture in the laboratory. Initial molecular analyses based on amplification, cloning and (Sanger) sequencing SSU rRNA genes from environmental samples led to the discovery of a wide diversity of novel lineages that have been densely populating universal phylogenetic trees ever since. The advent of high-throughput sequencing techniques making possible massive SSU rDNA metabarcoding and the direct sequencing of environmental community genomes (metagenomes) have only confirmed and amplified our initial suspicions that most biological diversity is microbial and that this diversity is far more extensive than we ever thought. In turn, enriching taxonomic sampling with novel environmental lineages is fundamental to help reconstructing the tree of life and unraveling past evolutionary history. High throughput molecular techniques allow sampling natural microbial communities at unprecedented levels, such that microbial ecology can now embrace classical ecological theory.

Thierry DUTOIT

Thierry Dutoit is a research director at the National Center for Scientific Research (CNRS) and a member of the Mediterranean Institute of Biodiversity and Ecology. Before joining the CNRS in 2012, he was Professor at the University of Avignon. He has co-authored more than 200 publications, 70 of which appeared in international indexed journals. He has also co-authored 50 scientific book chapters in the field of plant community ecology and conservation sciences.

As a plant ecologist, the objectives of his research are mainly on assembly rules and species-coexistence in Mediterranean plant communities. He is particularly interested in the long-term recovery of Mediterranean grasslands after major disturbances in historical or recent times. Since 2000, he is particularly involved in concrete restoration projects of Mediterranean rangelands after agricultural or industrial degradations.

During his talk, he will present the last conceptual advances in restoration ecology. He will address in particular the present paradigm shift between a costly and active restoration of the biodiversity of old cultural ecosystems and the passive restoration of the naturalness of new ecosystems. Nevertheless, several examples will be used to show how recent advances in ecological engineering can link these two concepts.

Release or restore ecosystems?

The strategy adopted by the European Commission in May 2011 aims to restore 15% of degraded ecosystems by 2020! Nevertheless, international recent meta-analyses have shown that it was not possible to restore the integrality of pre-existing ecosystems although many ecosystem services and biodiversity can be rehabilitated in comparison with degraded states. Facing the existence of ecologically and socio-economically irreversibility thresholds appeared recently the concept of «new-ecosystems» which are degraded ecosystems originated from former agricultural or industrial land uses but whose long-term evolution cannot be predicted because of the lack of historical references and the impacts of global changes. Should we then release nature in these ecosystems in the name of naturalness or rather still restore the former existing «cultural ecosystems» even incomplete in the name of biodiversity and ecosystem services?

Before the concept of «new ecosystem» will appear as a new paradigm that can be used as an alibi for the lack of restoration; it is then important to measure in the field their biodiversity, functionality and naturalness. We do that, in the plain of La Crau (Southeastern France) where several large scales restoration ecology projects have been realized in the last decade and allow us to compare the effects of different restoration strategies.

François MASSOL

François Massol is a researcher at the CNRS in the team "Evolution & Ecology" of the unit "Evolution, Ecology and Paleontology" at the University of Lille (UMR 8198). His research covers the study of spatial dynamics of interspecific interactions and of diversification at intra- and inter-specific levels, mostly from a theoretical viewpoint. More generally, he is interested in evolutionary ecology questions pertaining to species interaction networks, spatially structured ecological systems, and the diversity and stability of these systems. He also participates in interdisciplinary projects with researchers from mathematics, computer science, physics and social sciences, in particular on questions related to modelling and statistically analyzing contact and interaction networks.

Networks of interactions in ecology

Interactions between individuals, populations or species are a central pillar of ecology: all organisms interact, in various forms, with others, and these interactions in turn define the functioning of ecosystems. The past twenty years have seen a tremendous surge of interest in assessing and quantifying such interactions using networks, with numerous empirical studies reporting food webs, plant-pollination, seed disperser, host-parasite, metapopulation, epidemiological contact and other types of networks, and almost as numerous methodological papers advocating the use of this or that network metrics to understand ecological patterns and processes. To the neophyte, the diversity of methods and metrics used can be both a boon and a curse as there is little guidance over which methods have proved their worth to tackle a particular question. My talk will skim through this vast amount of literature in an attempt to categorize methodological issues, ecological questions and modeling approaches that have been proposed to deal with questions arising from ecological networks. I will try and connect methods used to analyze empirical data with the latest advances from theoretical models, and thus identify gaps to bridge in the coming years. Finally, I will introduce methods that are more widely used in fields other than ecology and explain their potential usefulness for the study of ecological networks.

Une conférence de sfécologie 2016

PUBLIC LECTURE

Du bon usage de la Science : L'écologie entre nature et politique - P.H. Gouyon

La science peut se vivre comme fournissant aux humains une connaissance et une compréhension du monde qui les entoure ou comme engendrant du progrès technique et de la richesse. Selon la priorité accordée à ces deux facettes, la nature peut être traitée en sujet d'étude ou en ennemi à abattre. Témoin Buffon, naturaliste et industriel, écrivant au XVIII^e siècle que « La nature brute est hideuse et mourante ». La science ne cesse de nous présenter deux aspects opposés de la nature, parfois objet complexe et précieux, parfois jeu de Légo dont on peut à loisir changer les pièces.. On en parle ?

Dire le bon usage de la nature : l'Écologie entre science et politique - C. Bonneuil

On a coutume d'opposer science et société, connaissance pure et demande sociale comme deux logiques en tension. Et les praticiens de l'écologie se vivent volontiers comme explorateurs d'un savoir fondamental qu'ils se doivent de vulgariser vers la société, notamment pour éclairer de meilleures politiques publiques de conservation (les praticiens de l'histoire ne se vivent-ils pas d'ailleurs –illusion nécessaire à l'enthousiasme de la quête de connaissance ?– de la même façon comme neutres et au-dessus d'« acteurs » dont la mémoire est à éduquer ?). Les choses se corsent quand il s'agit de décrire le bon état écologique d'un milieu ou de la planète, de dire le bon usage de la nature. De Buffon à Costanza, en passant par Haeckel et Odum, on esquissera quatre âges des discours et savoirs scientifiques sur le bon usage de la Terre, en montrant combien à chaque période, ils s'inscrivent dans un certain géopouvoir (ensemble de dispositifs et de représentations qui se donnent la terre entière comme objet de connaissance et comme objet de gouvernement). Matière à réflexion pour aujourd'hui à l'âge de la mondialisation financière et de la Grande accélération de l'Anthropocène ? Parlons-en ensemble

Pierre-Henri GOUYON

Pierre-Henri Gouyon est biologiste, ingénieur agronome, professeur au Muséum national d'histoire naturelle et à l'AgroParisTech et responsable de l'équipe de botanique du laboratoire « Origine, structure et évolution de la biodiversité » (CNRS/Muséum national d'histoire naturelle). Très impliqué dans les débats concernant les relations science et société, il intervient notamment dans des conférences sur les questions ayant trait à l'évolution, à la génétique, à l'écologie et à la bioéthique.

Christophe BONNEUIL

Christophe Bonneuil est chercheur au centre Koyré depuis 1998. Après des études de biologie et d'histoire, sa thèse d'histoire des sciences portait sur "Mettre en ordre et discipliner les tropiques : Les sciences du végétal dans l'empire français, 1870-1940" (1997). Depuis, il s'intéresse plus largement aux sciences de la vie de la fin du XIX^e siècle à aujourd'hui et aux transformations des rapports au vivant. Il vient de publier, avec Frédéric Thomas Gènes, pouvoirs et profits. Recherche publique et régimes de production des savoirs de Mendel aux OGM (Ed. Quae, 2009) et prépare un manuel d'introduction au domaine « Science, Technologie et Société » (coll. Repères) ainsi qu'un ouvrage sur La biologie à l'épreuve de la controverse OGM. Il enseigne au Master Histoire des Sciences Techniques et Sociétés de l'EHESS depuis 1998.

SYMPOSIA

Tuesday 25 October | 11:15-13:15

Adapting forests to climate change

Principal organizers:

Bruno Fady, INRA
Sylvie Oddou-Muratorio, INRA

Location : Room 92

Biological invasions and their management: bridging ecological to sociological considerations

Principal organizers:

David Renault, ECOBIO
Olivier Chabrierie, Université de Picardie Jules Verne
Thomas Guillemaud, INRA-Nice
Jacques Haury, AgroCampus Ouest, Rennes
Marie Laure Desprez-Loustau, BIOGECO, Bordeaux
Frédéric Simard, IRD

Location: Room 120

Tuesday 25 October | 15:45-17:45

Evolutionary ecology of non-genetic inheritance and epigenetics

Principal organizers:

Benoit Pujol, EDB-CNRS
Christoph Grunau, IHPE-Université Perpignan
Arnaud Sentis, EDB-Université Toulouse III

Location : Room 92

GDR Plas Phen

Reciprocal benefits between practitioners, researchers and the Biodiversity: a review of successful collaborations linking science and wildlife management

Principal organizers:

Aurélien Besnard, EPHE-CEFE-CNRS Montpellier
Cédric Dentant, Parc National des Ecrins
Alexandre Millon, IMBE -Aix Marseille Université
Laurent Tatin, Réserve Naturelle Nationale des Coussouls de Crau-CEN PACA

Location: Gastaud Amphitheatre

Wednesday 26 October | 8:45-10:45

How can paleoecology inform conservation in a changing world?

Principal organizers:

Stephen T. Jackson, University of Arizona
Morteza Djamali, IMBE

Location : Room 92

Paradox of the Mediterranean basin: an environment determined by heavy climatic and human factors, yet, with a remarkable biodiversity -The BIO- DIVME^X program

Principal organizers:

Virginie Baldy, IMBE
Yildiz Thomas, CEFE

Location: Room 120

Wednesday 26 October | 11:15-13:15

Ecological impacts of climate change in Polar Regions

Principal organizers:

Yan Ropert-Coudert, Institut Pluridisciplinaire
Hubert Curien, IPHC, Strasbourg
Marc Lebouvier , Station Biologique de Paim-
pont
David Renault, ECOBIO-Rennes

Location: Room 120

Advances in landscape ecology

Principal organizers:

Benjamin Bergerot, ECOBIO–Rennes
Françoise Burel, ECOBIO–Rennes
Aude Ernoult, ECOBIO–Rennes
Clélia Sirami, INRA-Toulouse

Location: Gastaud Amphitheatre

Wednesday 26 October | 15:45-17:45

Thursday 27 October | 10:45-12:45

Microbiota under omics spotlights

Principal organizers:

Denis Faure, CNRS
Jean-Christophe Simon, INRA
Dominique Joly, CNRS

Location: Room 120

Connectivity dynamics: patterns, processes, predictions

Principal organizers:

Björn Reineking, Irstea
Laurent Bergès, Irstea

Location: Gastaud Amphitheatre

Chemical Mediation in Ecosystems

Principal organizers:

Anne-Geneviève BAGNERES, CNRS
Catherine FERNANDEZ, IMBE

Location: Room 120

Conservation of biodiversity in the Mediterranean: How to link science and policy?

Principal organizers:

Grillas Patrick, Tour du Valat
Wolfgang Cramer, IMBE

Location: Gastaud Amphitheatre

Thursday 27 October | 15:15-17:15

Ecological and biogeographical consequences of global change on insular biodiversity

Principal organizers:

Frédéric Médail, Aix-Marseille Univ./ IMBE

Location: Saint-Jean Room

Conservatoire
du littoral

Effects of semi-natural habitats on pest insects and natural enemies: the role of habitat quality and spatial distribution

Principal organizers:

Claire Lavigne, INRA-Avignon

Armin Bischoff, IMBE

Location: Estaque Room

SIDE EVENTS & WORKSHOPS

Monday 24th October

Annual meeting of the 'Biological Invasions' GDR - Palais du Pharo (on invitation only)

Restitution session of the PEPS-CNRS initiative on Mangrove functionning - Palais du Pharo

Tuesday 25th October

10h45-11h15 - Salle 120

Early Career Program \ Coffee time with the plenary speaker

Interact directly with the plenary speaker, by asking him/her questions in a more informal environment than a big conference hall.

13h30-14h30 - Salle 120

Early Career Program \ 'Midi publi'

Adam Wheeler - Wiley Publishing (40min) - Learn more about the publishing process and learn top tips to improve the quality of your manuscript, from abstract to conclusion, and to make it stand out. A large part of the session will be allocated to Q&As.
&

Romain David, IMBE (15min) - Learn about Open Access, open data, data papers, data sensibility and property and the debate around it and why. Note that the talk about Open Access is aimed at presenting the concept and why it creates debate only.

WILEY

Tuesday 25th October

13h30-14h30 - Auditorium

ERC (the European Research Council): Funding Opportunities in Europe for Creative Minds from Anywhere in the World

Ines Marin-Moreno - Learn more about ERC's funding schemes and some tips to prepare a good proposal

18h30-20h00 - Salle 92

GDR PlasPhen and RTP3é & SFE Thematic Group: 'Genetic and non-genetic heredity'

Round table on genetic and epigenetic heredity

18h30-20h00 - Auditorium

SFE Thematic Group: 'Agricultural ecology'

Discussion about the thematic group

Tuesday 25th October

18h30-21h30 - Salle 120

GASBI (Groupe d'échanges entre Aménageurs et Scientifiques autour de la Biodiversité et des Infrastructures)

Retours sur un projet de réseau où chercheurs et aménageurs se rencontrent pour parler biodiversité et infrastructures

Wednesday 26th October

13h15-14h15 - Salle 120

Early Career Program \ 'Midi reseaux'

Meet other early career ecologists and networks that provide tools and activities for early career ecologists (ex: INNGE, Futur Earth, Salon de l'Ecologie, AFIE, SFE, ...)

13h15-14h15 - Auditorium

SFE Thematic Group: 'Long-term studies in ecology'

Discussion about the thematic group

Wednesday 26th October

18h30 -20h00 - Salle Estaque

CESAB (Centre for the synthesis and analysis of biodiversity)

Restitution workshop on CESAB funded projects with the PACA region

Thursday 27th October

10h00-10h45 - Salle 120

Early Career Program \ Coffee time with the plenary speaker

Interact directly with the plenary speaker, by asking him/her questions in a more informal environment than a big conference hall.

Thursday 27th October

13h15-14h15 - Salle 120

Early Career Program \ 'Midi SFE thematic groups'

Learn more about the thematic groups at the French Ecological Society (SFE), and how you can contribute.

This session will be facilitated to provide a maximum of space for discussion and for sharing ideas among all participants. Open to all ecologists. 1/ Presentation of thematic groups 2/ Discussion within groups 3/ Summary or highlights of each group discussion to all participants

13h15-14h15 - Auditorium

SFE Thematic Group: 'Landscape ecology'

Discussion about the thematic group

Thursday 27th October

17h15-18h30 - Salle

Roundtable "Small Mediterranean Islands (PIM Initiative)" - Management and conservation of small Mediterranean islands: which interfaces between ecological sciences, humanities and land-managers?

This roundtable aims to compare the various perceptions of scientists in ecology and humanities, and land-managers interested by the thematic of conservation and management of Mediterranean small islands facing global change.

This roundtable will take place after the symposium «Ecological and biogeographical implications of global change on insular biodiversity».

It will be conducted by Fabrice Bernard (Delegate Europe & International Conservatoire du Littoral / PIM Initiative) and Frédéric Médail (Professor at the University of Aix-Marseille / IMBE).

Conservatoire
du littoral

Friday 28th October

Annual meeting of the 'Chemical ecology' GDR - AMU St Charles (on invitation only).

FIELD TRIPS

The Sfécologie2016 field trips are scheduled for Friday, October 28th, 2016. Except for the "îles de Marseille", all field trips will start at 08h30 in the centre of Marseille (either Saint Charles Central Station or Pharo Palace, will be announced at the beginning of the conference and on the web page) and arrival time back in Marseille will be at about 18h00. Due to the proximity the Frioul Islands trip starts at 09h30 and last until 17h00. Meeting point of this field trip is the landing stage of the old harbor ("Vieux Port"). A lunch package will be delivered at the beginning of the trip.

Please check weather conditions before and adapt your clothing. For most field trips hiking boots are highly recommended, for the Calanques trip they are required.

These field trips may be subject to changes (hours, organization, contents ...). Registered participants will be informed. In the case of cancellation due to insufficient participation another field trip will be suggested, or participants will be reimbursed.

The Haute Provence : The Oak Observatory Research Station (O3HP) and the Luberon mountains

(Thierry Gauquelin)

Two visits are planned during this day: the visit of the O3HP (Oak Observatory at the OHP) and the visit of the Organic Biodiversity House of the Luberon Natural Regional Park in Manosque.

O3HP (Oak Observatory at the OHP) consists of an experimental field site, situated at the research center of the Observatory of the Upper-Provence (OHP, UMS CNRS Pythéas) at Saint Michel l'Observatoire, close to Forcalquier in the Alpes of the Upper-Provence and devoted to the understanding of the functioning of Mediterranean forests in the light of their future evolution. Its concerns the Downy Oak forest, one of three major species of importance in the region of the French Mediterranean, and covers more than 250.000 ha in the Provence-Alpes-Côte-d'Azur (PACA) Region.

The O3HP is built-up of several elements installed in a 80-year old forest dominated by Downy Oak (*Quercus pubescens*) mixed with some Montpellier Maple (*Acer monspessulanum*):

1. **Scaffolding** for canopy access, installed in a shape of a cross.

2. A **rain exclusion device** covering about half of the core plot (300 m²): The roof is opened and closed by retractable covers, intercepted rain is collected in an underground water reservoir. On the experimental plot, this allows to apply a precipitation scenario close to what models predict for the end of the 21st century, which means a reduction in annual rainfall of about 30% to 40%. The exclusion and the adjacent control plot can therefore be studied in terms of their biodiversity and ecosystem functioning in order to understand the impact of climate change for this type of Mediterranean ecosystem.

3. An environmental **sensing network** (atmospheric and soil temperature and humidity in the vertical profile, photosynthetically active and global radiation, precipitation, sap-flow, stem growth, etc.)

The O3HP has high scientific potential as its commonly used in a pluridisciplinary way by several local laboratories, and as it's open to any scientific collaboration. This associates atmospheric physicians with astrophysicians, ecophysiologists and ecologists, with strong interactions in between the staff of the OHP and the ones of the laboratories engaged in ecological or environ-

mental sciences such as the IMBE, CEREGE, CEA Cadarache.

In Manosque the Organic Biodiversity house (Thomassine Domain) offers an original and educational stroll through the extraordinary diversity of crops, including an orchard of over 400 varieties of fruit trees.

A permanent exhibition on the domestication of fruit and eight terraced gardens at the foot of a beautiful Provencal house, that will make you understand the millennial work of man to select and multiply the fruits adapted to the soils from wild plants.

Mountain forests and open habitats of the “Mont Ventoux”

(Bruno Fady, Brigitte Talon)

Mount Ventoux, as well as large areas of the French Southern Alps, were the scene of large scale reforestation at the end of the 19th century and during the first half of the 20th century: soil erosion was successfully controlled and forests devastated by overexploitation and overgrazing were successfully restored. This restoration is moving into a second, dynamic phase as, for several decades now, Beech (*Fagus sylvatica*) and Silver fir (*Abies alba*), which had remained within residual stands, are recolonizing the planted pine (*Pinus nigra*, *P. sylvestris*, *P. uncinata*) stands. The new, mostly heterogeneous and mixed stands which result from this “maturation process” form a complex landscape mosaic that opens interesting prospects for the sustainability of forest trees and their associated biodiversity. However, climate change constitutes a new, very real threat, of which consequences are already obvious on Mount Ventoux.

The challenge for foresters is to anticipate as much as possible these changes and to adjust

forest management to this evolution. Mount Ventoux is not only a MAB reserve and a Natura 2000 site, it is also a unique and original natural scientific laboratory. The current – and a short term unavoidable – forest decline in some areas requires a new approach to ecological restoration which will benefit from current research at INRA Avignon within the framework of international networks.

During this full day excursion, you will discover the various landscapes and vegetation types of the “Giant of Provence”, from its diverse forests at mid-elevation to its exceptional, endemic-rich, Alpine flora under its summit, 1,910 m above sea-level.

Hiking boots are recommended.

The Calanques National Park: Nature conservation and plant ecology

(Arne Saatkamp, Daniel Pavon, Gabriel Nève)

This field trip will take you into the Calanques National Park, where we will hike from the coast to the peaks of the Massif de Marseilleveyre for discovering its terrestrial flora and fauna.

The Calanques NP is an important field site for

several research projects conducted by the IMBE on nature conservation, population dynamics, ecology and evolution of rare plants, the effect of pollution and community assemblies.

Hiking boots required.

Field trip on the Frioul islands (Marseille)

(Frédéric Médail and Philippe Ponel)

The small islands (1–100 ha) and islets (less than 1 ha) represent the most common insular realm of the Mediterranean Basin which includes several thousands of islands. Compared to continent and larger islands, small insular communities and ecosystems are more sensitive to exogenous disturbances and to environmental stochasticity, which often promotes rapid and contrasted dynamics.

This field trip will be devoted to discovery of a small Mediterranean archipelago close to Marseilles, the Frioul Islands that includes two main islands, Ratonneau (95 ha) and Pomègues (89 ha), artificially connected since the 19th century. These rocky limestone islands are interesting from an ecological and conservation point of

view, with the existence of several unique species assemblages and rare salt-tolerant and thermophilous taxa of plants and insects.

Frioul islands house large seabird colonies (notably the yellow-legged gull, *Larus michaellis*) that exert specific disturbance with a high pressure on ecosystems by modifying patterns and dynamics of plant communities. The impact of seabirds on Mediterranean oligotrophic vegetation is therefore often severe, because of physical (trampling, pulling-up, soil erosion, burrowing) and chemical (soil manuring induced by guano rich in phosphorous and nitrogen compounds, salt deposition) disturbances. The effects of this large gull colony on the flora and vegetation were studied through the analysis of species turnover that have occurred in the past fifty years. Plant turnover appears to be positively linked to gull nesting density and it is inversely correlated to island area since small islets appear to be more affected than larger islands. Plants with the highest turnover rate were primarily ruderal, annual, wind-dispersed species, and with a large distribution.

The western coast of Pomègues island (photo F. Médail / IMBE).

Ecology and restoration of Mediterranean steppe vegetation (La Crau) (Thierry Dutoit)

The Nature Reserve of "Cousouls de Crau" (7400 ha) is one of the last xeric steppes of Europe. This species-rich vegetation hosts many steppic birds and some endemic arthropods. Its unique vegetation has been shaped over centuries by (1) the dry and windy Mediterranean climate (mean annual temperature 14°C; mean annual precipitation ~500 mm; >3,000 hours of sunshine per year and strong winds that blow on average 334 days annually), (2) very particular soil conditions: only about 40 cm deep and a 5 to 25m thick impermeable bedrock underneath. About 50% of the ground is covered by large stones and (3) at least two thousand years of sheep grazing. Today, almost 80% of the original area disappeared due to human activities (dump, military airport, cropping...).

For fifteen years, experiments have been conducted by the Mediterranean Institute of Biodiversity and Ecology to assess restoration techniques. For example, turf containing the living dominant perennial species (*Brachypodium retusum*) was transferred on a filled quarry to assess its effect on plant community assembly.

To mitigate future damages, an experiment was also carried out on an underground pipeline where soil was transferred to accelerate the establishment of steppe vegetation. An abandoned 350 ha orchard was rehabilitated in a steppe-like habitat: nurse species seeding, topsoil removal and translocation and hay transfer were assessed with the long-term objective to restore the steppe vegetation in term of species richness, structure and composition.

The field trip will focus on the original steppe ecosystem and on the experimental plots.

Hiking boots recommended.

INFORMATION ON COMMUNICATIONS

Oral presentations

There are three types of oral presentations :

- short presentation 6 min,
- standard presentation : 12 min + 3 min of questions, and
- symposium presentations (see details in the programme)

Please respect the allowed time: no more than 12 min for a standard communication. The chair(wo)man will indicate you when you have one minute speaking time remaining before you stop. For the presentations we accept the formats: Microsoft PowerPoint and PDF.

The rooms will be equipped with a projector and a laser pointer. You are not allowed to use your own laptop.

Check that your presentation works well before the session and upload it on the server at the entrance of the congress, if possible the day before your talk.

Please arrive at your session 15 minutes prior to the published start time. Before the start of your session, please make yourself known to your chair(wo)man and indicate how you would like to be introduced.

It is essential you have all authors' permission to give the presentation.

Posters

The posters will be displayed in the exhibition hall, at the opposite of the main entrance.

Posters should be in PORTRAIT format with a maximum dimensions A0 (841mm wide and 1189mm tall).

Poster areas will be equiped with poster boards and material to hang your poster (clips).

You can hang up your posters from 8:00 am to 7:30 pm. They will be displayed according to the number found in the program. Volunteers will be there to help you. The poster sessions will take place on Tuesday and Thursday. They will allow you presenting your results and your presence is required. All posters should be removed at the end of the session and not after Thursday 8:00 pm.

ORAL PRESENTATIONS: TUESDAY 25 OCTOBER

9:30

Plenary - Understanding motivations as the key to addressing the illegal international trade in wildlife - Eleanor Milner-Gulland

Location: Auditorium

11:15

Conservation biology, policies and management - Session #1

Location: Gastaud Amphitheater

11:15 Mediterranean Marine Protected Areas: Do they work? - **Sylvaine Giakoumi**

11:30 A novel framework for the evaluation of Mediterranean Marine Protected Areas performance - **Claudia Scianna**

11:45 Marine Protected Areas: 4 years to reach the Aichi Target, but where are we at? - **Chloe Webster**

12:00 Coastal anthropogenic pressures explain the ecological decline of Posidonia oceanica: implications for management and conservation - **Julie Deter**

12:15 Fish nurseries: essential habitat availability and management across the Mediterranean - **Adrien Cheminée**

12:30 A comparison among coralligenous-based indices for the assessment of the marine ecological quality - **Giulia Gatti**

12:45 Updating knowledge on salmonids fertility using ultrasound imaging technology - **Guillaume Forget**

13:00 PROTEKER: Setting up of an underwater observatory at the Kerguelen Islands (Austral Ocean) - **Jean-Pierre Féral**

11:15

Agricultural ecology - Session #1

Location: Auditorium

11:15 A global trophic network collapse in intensive farmland landscapes? Lessons from 22 years biodiversity monitoring in a LTER study site - **Sabrina Gaba**

11:30 Mediterranean agro-ecosystems between tradition, industrialisation, and innovation. How do multifunctional mixed farming systems support agroecology and biodiversity? - **Alberte Bondeau**

11:45 Experimental assessment of insect pollination on rape seed yield in real field conditions demonstrates positive effect of wild bees - **Thomas Perrot**

12:00 Crop genetic diversity is associated with more efficient predation in wheat fields - **Emmanuelle Porcher**

12:15 How does earthworm functional diversity affect rapeseed-weeds interactions? - **Marine Zwické**

12:30 Intercropping promotes the ability of chickpea and durum wheat to facilitate phosphorus and nitrogen acquisition through root-induced processes in an alkaline N-deficient soil - **Latati Mourad**

12:45 Rice-growing and productivity to alleviate poverty in the face of climate change in Tonga (West-Cameroon) - **Christelle Tchieudjo**

12:51 Productivity and uses of tree species in cocoa based agroforestry systems - **Veronique Ngagoum**

13:00 A model of social and environmental sustainability in the Amazonian forest - **Maria Lemoine**

13:06 Premières données sur le cycle biologique et la dynamique des populations du Psylle de l'olivier (*Euphyllura olivina* CSTA 1839, Hemiptera : Psyllidae) dans la région de Batna- Algérie.
- **Smail Chafaa**

11:15

Behavioural ecology - Session #1

Location: Estaque

- 11:15 Heritability of social information use: an experimental approach in a wild bird population - **Jennifer Morinay**
- 11:30 Do competition and predation risk affect weed seed selectivity in granivorous carabid beetles? - **Alice Charalabidis**
- 11:45 Melanin-based coloration reflects sex-specific investment in reproduction in wild brown trout - **Lisa Jacquin**
- 12:00 Desert amphibian selection of arid land breeding habitat may undermine reproductive effort - **Anja Kiesow**
- 12:15 Maternal traits and breeding success in the perspective of climate change: is the future of the Antarctic fur seal (*Arctocephalus gazella*) getting darker? - **Lauriane Massardier-Galata**
- 12:30 Linking individual foraging tactics, specialization and lifetime reproductive success in a Scopoli's shearwater population - **Nicolas Courbin**
- 12:45 Influence of intraguild interactions on large carnivore foraging strategies - **Marion Valeix**
- 13:00 Fatal shark attacks on humans : rather an individual behavioral problem than a collective ecological issue - **Eric Clua**

11:15

Population and community ecology - Session #1

Location: Grand Large

- 11:15 On the path to extinction: climatic and anthropogenic drivers, buffering capacity and viability of a grey-headed albatross population. - **Deborah Pardo**
- 11:30 Long-term changes in field margin vegetation in North-western France - **Audrey Alignier**
- 11:45 Do good neighbors compensate for bad climate? The effect of density, evolutionary neighborhood and fungi on vulnerability of seedlings to climatic stress - **Andreas Prinzing**
- 12:00 Body size response to climate and net primary production: testing the explanatory power of environmental anomalies in temperate songbirds - **Nicolas Dubos**
- 12:15 Very high synchrony of survival between species for temperate songbirds: which climate contribution? - **Manon Ghislain**
- 12:30 Estimation of the tundra vegetation to environmental changes: The width of the spatial and time windows matters - **Saccone Patrick**
- 12:45 From individuals to populations: intraspecific competition breaks the temperature-size rule - **Thomas Tully**
- 13:00 Surface and subsurface invertebrate communities across a thermal gradient in a natural experiment in Icelandic streams - **Daniel Govoni**

11:15

Soil ecology, biogeochemistry and plant-soil interactions - Session #1

Location: Joliette

- 11:15 Distance from the sea as a driving force of microbial communities under water potential stresses in litters of two typical Mediterranean plant species - **Anne Marie Farnet Da Silva**
- 11:30 There is no place like home? The impact of climate change on the litter decomposition: a Mediterranean forest case study. - **Susana Pereira**
- 11:45 Consumer-resources interactions Driving Ecosystem processes in a Mediterranean specific rich rangeland in southern France - **Elena Kazakou**
- 12:00 Changes in carbon dioxide and methane fluxes in Sphagnum peat meadows invaded by vascular plants (*Molinia caerulea*) - **Fabien Leroy**
- 12:15 Nanoporous clay with interesting environmental properties: carbon sink and pesticides trapping - **Thierry Wignier**
- 12:30 Do tree species richness or identity affect fine root productivity and soil C and N levels? - **Alison Munson**
- 12:36 Interactions between earthworms and plants shape microbial communities of a constructed Technosol - **Thomas Lerch**

11:15

Symposium - Adapting forests to climate change

Location: Salle 92

- 11:15 Predicting the adaptive dynamics of tree populations under climate change: lessons from a Physio-Demo-Genetic simulation model - **Sylvie Oddou-Muratorio**

11:45

Using past climate change data and niche modeling to predict the past, modern and future distribution of Atlas cedar forests in Morocco - **Rachid Cheddadi**

12:00

Integrating economic constraints into the modelling of tree species distributions - **Jean-Sauveur Ay**

12:15

Disentangling direct and indirect effects of climate change on ecosystem productivity in European temperate forests - **Xavier Morin**

12:30

Adaptive Challenges for European Forests - **Joanne Fitzgerald**

12:45

Paradise burns: life-history evolution and future survival of serotinous tree species - **Alexander Kubisch**

13:00

Can we predict forest composition across space and time in Central Africa? - **Frédéric Mortier**

11:15

Symposium - Biological invasions and their management: bridging ecological to sociological considerations

Location: Salle 120

- 11:15 Eco-evolutionary dynamics of dispersal during biological invasions - **Dries Bonte**

11:35

Hydrological alteration and invasibility in Mediterranean streams - **Emili Garcia-Berthou**

11:55

Massive yet massively underestimated global costs of invasive insects - **Franck Courchamp**

12:15

Insights from evolutionary genetics of invasive species: introduction routes, bottlenecks and admixtures - **Eric Lombaert**

12:35

How people make sense of invasive species: values, attitudes and (shared) understandings - **Anke Fischer**

11:15

Ecosystems functioning and dynamics - Session #1

Location: Saint Jean

- 11:15 Rainwater deficit affects litter mass loss and microbial decomposer communities in a Mediterranean forest - **Pascal Mirleau**
- 11:30 Increased leaf litter decomposition with increasing radionuclide contamination in the forests of the Chernobyl exclusion zone - **Jean-Marc Bonzom**
- 11:45 Data-paper: Long-term monitoring of benthic macrofauna in the Pertuis-Charentais (2004-2015) - **Anne S. Philippe**
- 12:00 Microbes living on marine plastic debris: the Tara Mediterranean expedition - **Claire Dussud**
- 12:15 Predicting effects of multiple environmental changes on community respiration in a microcosm experiment. - **Aurélie Garnier**
- 12:30 Grassland carbon and water fluxes under global changes: new insights from the Montpellier European Ectron - **Alexandru Milcu**
- 12:45 Interactions between green and brown food webs: consequences on ecosystem functioning and stability - **Elisa Thébault**
- 13:00 Structure et fonctionnement du microbiote des nuages - **Pierre Amato**

11:15

Genetics and molecular ecology - Session #1

Location: Lacydon

- 11:15 Molecular ecology of the Mediterranean red coral in heterogeneous seascapes - **Marine Pratlong**

11:30

Multiscale analysis of the coral holobiont thermotolerance under contrasted thermal environment - **Kelly Brener Raffalli**

11:45

Deciphering the trophic plasticity of a critically endangered fish species (*Zingel asper* L.) by combining metabarcoding, prey availability and microhabitat data - **Emmanuel Corse**

12:00

New insights into the population genetics of partially clonal organisms: when seagrass data meet theoretical expectations - **Diane Bailleul**

12:15

Algal-bacterial interactions: a culture-dependent method to study acclimation of *Ectocarpus subulatus* to salinity - **Hetty Kleinjan**

12:30

Ecological reliability of eDNA metabarcoding approach for fish biodiversity survey in freshwater ecosystems: comparison to traditional sampling methods - **Raphaël Civade**

12:45

Metabarcoding-like diet assessment in carnivorous sponges. The case study of *Lycopodina hypogaea* and ecological implications - **Pierre-Alexandre Rastorgueff**

13:00

pcadapt: an R package for performing genome scans for selection based on principal component analysis - **Eric Bazin**

13:06

Old origin of an endogenous retroviral protective copy in sheep. - **Tristan Cumér**

14:30

Plenary - Mutualisms: drivers, and in turn victims, of biological invasions - Anna Traveset

Location: Auditorium

15:45

Symposium - Reciprocal benefits between practitioners, researchers and the biodiversity

Location: Gastaud Amphitheater

- 15:45 10 years on the interface between management and research. - **Aurélien Besnard**
- 16:00 Bringing together resource manager and academic expertise to survey the rare and elusive Pyrenean desman. - **Frank D'Amico**
- 16:15 Optimising invasive management short of eradication: Predicting settling rules by recolonising American mink post-culling. - **Xavier Lambin**
- 16:30 Managing ecosystems in the Arctic region - **Nigel Yoccoz**
- 16:45 Conservation and management of large carnivores in France: A successful and beneficial collaboration between ONCFS practitioners and CNRS researchers - **Olivier Gimenez**
- 17:00 Sentinel Alpine Pasture: combining scientific, technical and empirical knowledge for a collective management of adaptation to climate change. - **Baptiste Nettier**
- 17:15 A collaborative approach of Crau plain grasshopper conservation planning. - **Linda Bröder**
- 17:30 The role of scientific councils in bringing together researchers and practitioners: potentials and limitations - **Gaëlle Ronsin**

15:45

Agricultural ecology - Session #2

Location: Auditorium

- 15:45 Monitoring the consequences of the use of agro-chemicals on common biodiversity in French farmlands - **Alexandre Villers**
- 16:00 How can ecology help optimize mixtures of varieties in multifunctional agriculture? - **Sébastien Barot**
- 16:15 Temporal differentiation of soil biota communities and of trophic networks in response to arable crop management strategies - **Mickael Hedde**
- 16:30 Shifts in belowground interactions in a legume-cereal intercrop: a test of the Stress Gradient Hypothesis - **Simon Boudsocq**
- 16:45 Genetic Diversity of Oilseed Rape Fields and Feral Populations in the Context of Coexistence with GM crops - **Diane Bailleul**
- 17:00 Possibilités de substitution des moyens chimiques par une lutte biologique contre la cochenille blanche du palmier dattier *Parlatoria blanchardi targ.*, 1868 (Homoptera, Diaspididae) dans les palmeraies de Biskra en Algérie. - **Ammar Achoura**

15:45

Restoration ecology - Session #1

Location: Estaque

- 15:45 Drivers of riparian plant community restoration after tree planting: role of plant succession and time-versus-space dispersal - **Bérenger Bourgeois**
- 16:00 Vegetation and entomofauna recolonisation and dynamics during restoration process of a former field after sowing and hay transfer - **Sébastien Gallet**

16:15	Ecological engineering for the reinforcement of <i>Astragalus tragacantha</i> populations in the Calanques National Park - Lucie Miché	17:00	Plant productivity-diversity relationships: a modeling approach to understand the influence of species pool structure - Loïc Chalmandrier
16:30	Differentiation among populations of <i>Brachypodium retusum</i> : Consequences for the restoration of Mediterranean steppes. - Christel Vidaller	17:15	Is thyme a bouncer ? Analysing the effect of a facilitator on community assembly with presence-absence data. - Fabien Laroche
16:45	What do we know about subtropical and tropical old-growth grasslands resilience and restoration? - Elise Buisson	17:21	Observatoire des petits Mammifères Indicateurs des Changements Environnementaux, le cas du Delta du Sénégal : ObsMICE - Ambroise Dalecky
17:00	Modifier des perceptions, obstacle ou défi ? La flexibilité cognitive au service d'une restauration écologique plus adaptée - Johnny Fenianos	17:30	Avian diversity in Mt. Matutum Protected Landscape, Philippines - Olga Nuneza

15:45

Population and community ecology-Session #2

Location: Grand Large

15:45	Interactions between species traits explain population dynamics in stream fishes under climate change - Mathieu Chevalier
16:00	How shift in traits composition along climatic gradients emerge from the interplay of climate stress and competition? A theoretical model analysis in forests. - Georges Kunstler
16:15	Ecology, evolution and conservation of species with extreme life-histories: the emblematic Mediterranean red coral <i>Corallium rubrum</i> - Ignasi Montero-Serra
16:30	Risk reduction traits of Mediterranean temporary pool plants - Arne Saatkamp
16:45	Reproductive phenology: a key aspect of ecological strategies in Mediterranean populations of plant species - Jules Segrestin

15:45

Soil ecology, biogeochemistry and plant-soil interactions - Session #2

Location: Joliette

15:45	Stabilization of soil aggregates along a plant community succession: indirect positive effects of root biomass and root heterogeneity - Amandine Erktan
16:00	Relationships between plant community functioning and soil carbon stocks based on a study of 30 permanent mowed grasslands over two French Regional Natural Parks - Soline Masson
16:15	The role of plant traits, microbes and soil abiotic properties on ecosystem properties from grassland soils - Nicolas Legay
16:30	Plant-earthworm interaction : influence of age and proportion of casts in the soil on root morphology and nitrogen uptake by the plant - Corinne Agapit

15:45

Global change - Session #1

Location: Lacydon

- | |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>15:45 Influence of habitat matching on species range shift under climate change - Félix Pellerin</p> <p>16:00 Investigating the demogenetic responses of exploited Atlantic salmon (<i>Salmo salar</i>) populations to climate change - Mathieu Buoro</p> <p>16:15 Modeling species present distribution and predicting the impacts of climate change in data-poor areas : an example from the Kerguelen Plateau. - Charlène Guillaumot</p> <p>16:30 Temporal dynamics of assembly rules in stream fish communities - Lucie Kuczynski</p> <p>16:45 Species range expansion constrains the ecological niches of resident butterflies. - Hélène Audusseau</p> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

15:45

Symposium - Evolutionary ecology of non-genetic inheritance and epigenetics

Location: Salle 92

- | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>15:45 Recent developments in the field of nongenetic inheritance - Etienne Danchin</p> <p>16:15 Population epigenomics in plants - Frank Johannes</p> <p>16:45 Towards a role of DNA methylation in plant phenotypic plasticity - Stéphane Maury</p> <p>17:15 Understanding how the genome shapes the epigenome in plants - Clementine Vitte</p> <p>17:45 Inclusive inheritance and the extended evolutionary synthesis - Kevin Laland</p> |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

15:45

Biological invasions - Session #1

Location: Salle 120

- | |
|-----------------------------------------------------------------------------------------------------------------------------------------|
| <p>15:45 Simulating plant invasion dynamics in alpine ecosystems under climate change and land-use scenarios - Marta Carboni</p> |
|-----------------------------------------------------------------------------------------------------------------------------------------|

16:00	Establishing ecological strategies to limit the expansion of Reynoutria japonica: effects on vegetation and soil restorations - Alice Michelot-Antalik	16:30	Characterizing meta-ecosystems: feeding data into the theory - Isabelle Gounand
16:15	Globalization and the spread of invasive ants - Cleo Bertelsmeier	16:45	Variability and structural stability of ecosystems: two sides of the same coin - Jean-Francois Arnoldi
16:30	Commensal rodents in Southern Senegal, black rat and mouse invasion zone - Odile Fossati	17:00	Maximization of functional diversity and ecosystem multifunctionality in global drylands - Yoann Le Bagousse-Pinguet
16:45	Predicting how altering propagule pressure changes establishment rates of exotic ant species in North America - Olivier Blight	17:15	Invertebrate diversity in Icelandic freshwater springs - Agnes-Katharina Kreiling
17:00	Impact de Gambusia holbrookii sur la structure et le fonctionnement des mares temporaires de la Numidie orientale - Dalal Haiahem	17:30	Assessing interactive effects of nutrients and temperature on headwater ecosystem functioning: a correlative approach along natural gradients - Jeremy Jabiol
17:06	Colonization does not necessary mean Invasion - Anne Charpentier	17:36	Modulation of interactions between bramble thicket and oak seedlings by stress (light, water and simulated browsing) - Lisa Laurent
17:15	Introduction and dispersal of an American termite in Paris - Guillaume Baudouin		
17:21	Assessing relationships between invasive and native fish species in marine protected areas across the Mediterranean Sea - Sylvaine Giakoumi		

15:45

Ecosystems functioning and dynamics - Session #2

Location: Saint Jean

15:45	N-dimensional hypervolumes to study stability of complex ecosystems under environmental change - Ceres Barros
16:00	Granger causality: a tool to explain causal links between ecosystem components? - Frederic Barraquand
16:15	Spatial scaling of biodiversity and ecosystem stability with a simple model - Robin Delsol

ORAL PRESENTATIONS: WEDNESDAY 26 OCTOBER

WEDNESDAY 26

8:45

Socio-ecosystems and ecological services - Session #1

Location: Estaque

- 8:45 Biodiversity and wildlife tourism in Southern Africa: a cultural ecosystem service assessment - **Ugo Arbieu**
- 9:00 Developing an integrative multi-scale approach of regional agriculture to support the assessment of pest regulation service delivered by farmland biodiversity - **Annick Gibon**
- 9:15 Why urban poor exposed to climate change in coastal Bangladesh are more concerned about ecosystem disservices than services? - **Md Mustafa Saroor**
- 9:30 Operationalizing safe operating space for regional social-ecological system - **Md Sarwar Sohel**
- 9:45 From long-term monitoring of biodiversity and evaluation of ecosystem functioning to stakeholders viewpoint and ecosystem services provisioning: field socio-ecological experiments in a French LTSER - **Vincent Bretagnolle**
- 10:00 Household Fuel Use in Rural China - **Christophe Muller**
- 10:06 Citizen science and identification keys to study the perception of natural organisms - **Mathilde Delaunay**

8:45

Symposium - How can paleoecology inform conservation in a changing world?

Location: Salle 92

- 8:45 One past, many futures: using history to inform climate-change adaptation - **Stephen Jackson**

9:05

Applying paleoenvironmental records to critical problems in natural resource management - **Stephen Gray**

9:25

Could the Pleistocene history of *Taxus baccata* explain its present distribution? By PasDETbac working group. - **Jacques-Louis De Beaulieu**

9:45

Raptors, rodents, and conservation paleobiology: using skeletal remains to track the development of an energetically novel ecosystem in the Great Basin desert of North America - **Rebecca C. Terry**

10:05

Transboundary environmental flows to the Colorado River Delta: When the past matters and when it doesn't - **Karl Flessa**

10:25

Historical Ecology: If the Past Teaches, what does the Future Learn? - **Carole Crumley**

8:45

Symposium - Paradox of the Mediterranean basin: The BIODIVMEX program

Location: Salle 120

- 8:45 The functional ecology of arable weeds: Reconstructing prehistoric farming practices through comparison with present-day 'traditional' agrosystems - **Amy Bogaard**

9:15

Connectivity and fragmentation in the Mediterranean - How are mosaics of diversity (at gene, species and community levels) connected in the socio-ecological systems of the Mediterranean? - **Christophe Lejeusne**

9:45

Assessing the vulnerability and the socio-ecological resilience of biodiversity and functioning of terrestrial and marine Mediterranean ecosystems - **Charles-François Boudouresque**

10:00	Mediterranean biodiversity and ecosystem services values. - Pierre Battéau	10:30	Diversité du peuplement entomologique sur Juniperus communis ssp. hemisphaerica & Juniperus oxycedrus ssp. rufescens de la forêt de Tigounatine (Tikjda, Djurdjura sud). - Razika Abbassen
10:15	Bio and Agro-diversity of Past and Present Mediterranean Landscapes - Ilham Bentaleb	10:36	Epibenthic macroinvertebrate diversity in relation to local ecology in groundwater-fed lava caves in North East Iceland. - Doriane Combot
10:30	Chemical ecology as an important aspect of biodiversity and ecosystem functioning in marine planktonic environments - Adrianna Ianora		
8:45	Ecosystems functioning and dynamics - Session #3		
Location: Saint Jean			
8:45	Plant diversity and functioning of a Mediterranean shrubland under drier conditions - Natalia Rodriguez-Ramirez	8:45	Worldwide invasion by <i>Ulex europeus</i> : a history of ecology, evolution and sociology. - Anne Atlan
9:00	Local vs. global drivers of vegetation changes in the herb layer of a temperate forest over the last four decades - Deborah Closset-Kopp	9:00	The threat is not over yet: towards a model of future distribution of an invasive species under global change - Laëtitia Buisson
9:15	Effects of dry period length and vegetation on organic matter decomposition in vernal pools - Pauline Hervé	9:15	Why are invasive alien species still legal? - Elsa Bonnaud
9:30	Ecophysiological modelling of tree primary production and carbon allocation in a Canadian boreal region - Fabio Gennaretti	9:30	Tritrophic interactions between host plant, phytophagous and entomophagous insects: the case of the invasive species, <i>Drosophila suzukii</i> . - Patricia Gibert
9:45	Change in growth patterns preceding tree mortality: synthesis from a new global ring-width database - Maxime Cailleret	9:45	Feral cat population on large and inhabited island: efficiency of small scale control - Pauline Palmas
10:00	Understanding the effect of warming temperatures on spring phenology of trees in the Alps using data from a citizen science program - Daphné Asse	10:00	Novel prediction of Asian Hornet invasion range and impact - Alice Fourrier
10:15	Mangrove ecosystem functioning and dynamics: response to a long-term disturbance by a domestic wastewater discharge - Cécile Capdeville	10:15	Invasive Water Primroses in France become a weed problem in meadows - Jacques Haury
		10:21	Eradication of the Black Rat, <i>Rattus rattus</i> , and biodiversity monitoring in the French Mediterranean islands : the case study of Riou Archipelago in the Calanques national Park - Mathilde Meheut

10:30	Adaptation of the water primroses <i>Ludwigia grandiflora</i> to terrestrial condition - Dominique Barloy	10:21	The human PIG-A assay : a new tool for environmental mutagenesis assessment - Pierre Castel
10:36	Ancient versus recent invasion: two genetic signatures in colonization history of a freshwater selfing snail <i>Galba cubensis</i> - Manon Lounnas	10:30	Functional trajectories and current impairments of trees in the case of a long term decline: the study of beech in Fontainebleau forest. - Elena Grandá
8:45	Ecophysiology	10:36	Tritiated and non tritiated ITER-like tungsten particles: from synthesis to genotoxicity - Thierry Orsière
Location: Auditorium		8:45	Conservation biology, policies and management - Session #2
8:45	The importance of egg size for variation in metabolism, growth and behaviour of individuals in a polymorphic fish - Louise Vernier	8:45	Reintroductions in Europe : Phylogenetic and Functional Representativeness of Translocated Species - Charles Thevenin
9:00	Response of a cold-water-adapted species, the arctic charr <i>Salvelinus alpinus</i> , to thermal changes : an eco-physiological perspective - Lisandrina Mari	9:00	Behavioural and ecophysiological responses of Hermann's tortoise (<i>Testudo hermanni hermanni</i>) to translocation - Fabien Pille
9:15	Hungry for nutrients in heterogeneous environments: Nutrient temporal variance and covariance effects on the performance of nutritionally co-limited individuals. - Apostolos-Manuel Koussoroplis	9:15	Roads and bats: use of existing gantries for the restoration of ecological connectivity. - Fabien Claireau
9:30	Warming tolerance across insect ontogeny: influence of joint shifts in microclimates and thermal limits - Sylvain Pincebourde	9:30	The habitat value of power line rights-of-way for wild bees in rural woody landscapes - Violette Le Féon
9:45	Energyscapes and prey fields shape little auk wintering hotspots under climate change - Françoise Amélineau	9:45	An indicator of the pollination service at a local scale based on crop pollinator dependence - Gabrielle Martin
10:00	Predicting hydrological affinities of herbaceous species from their functional traits ,À Linking physiological and morpho-anatomical traits - Michaël Bellau	10:00	Terrestrial biodiversity loss in Norway due to hydropower production: A life cycle assesment approach - Martin Dorber
10:15	Genotoxicity tests on mouse embryos : a model to assess environmental impact on reproduction - Lucie Rolland	10:15	Recent trends in the distribution of butterflies and dragonflies in Western Europe - Gaël Delpon

10:30	Why and how include land use change modelling in regional land planning? Example from a French Mediterranean Region - Mathilde Hervé	10:15	Environmental and spatial effects on the determination of shell traits of the common whelk (<i>Buccinum undatum</i> L.) - Hildur Magnusdottir
10:36	Vers une approche globale de la structuration écologique des zones humides dans un contexte industriel - Alain Thiéry	10:30	Offspring reaction norms shaped by parental environment: transgenerational plasticity of inducible defenses - Emilien Luquet
8:45		10:36	The evolution of individual diversification: can egg size variation facilitate the rapid evolution of resource polymorphism in fishes? - Samantha Victoria Beck
	Evolutionary ecology - Session #1		
	Location: Grand Large		
8:45	Bridging the gap between evolutionary and conservation biology: Post-glacial range expansion shapes the spatial genetic structure of a habitat forming octocoral - Jean-Baptiste Ledoux	8:45	
9:00	How can Eco Evo Devo studies on sponges help us to understand the effect of pollutants on both marine biodiversity and human health? - Emmanuelle Renard	9:00	
9:15	High number of small populations as a tool to study evolutionary and ecological processes of diversification: insight from Arctic charr in lava caves - Camille Leblanc	9:15	
9:30	Importance of plasticity for divergence of threespine stickleback (<i>Gasterosteus aculeatus</i>) in the dynamic Lake M_vatn, Iceland - Coralie Delarue	9:30	
9:45	The importance of ecology, evolution and development in shaping biodiversity of threespine stickleback: Long term monitoring in the dynamic Lake M_vatn Iceland - Bjarni Kristofer Kristjansson	9:45	
10:00	Resource allocation trade-offs and senescence may explain the temperature-size rule in aquatic organisms - Ayala Loisel	10:00	
			Landscape ecology - Session #1
	Location: Joliette		
		8:45	When landscape ecology supports ecosystem services bundles' spatialisation - Leita Tschanz
		9:00	Taking into account a distance decay of the landscape effect when modelling ecological responses - Paul Miguët
		9:15	How prioritize habitat patches for conserving landscape connectivity? Use of least-cost versus resistance distances in graph models - Catherine Avon
		9:30	Inconsistent spatial scale in species-landscape relationships: a case study with flower-visitors - Martin Jeanmougin
		9:45	Metapopulation dynamics and meta-community assembly in the freshwater snails of Guadeloupe - Jelena Pantel
		10:00	Is there a link between <i>Posidonia oceanica</i> spatial configuration and coastal anthropogenic pressures? - Adrien Inacio

- 10:15 Elemental fingerprinting may help studying connectivity in the invasive gastropod *Crepidula fornicata* - **Thierry Comtet**
- 10:21 Incorporating lakes in stream fish habitat models: are we missing a key landscape attribute? - **Marc Pépino**
- 10:30 Are stormwater ponds partitioning measures effective and relevant for amphibians? - **Jonathan Jumeau**
- 10:36 Effect of the spatial distribution of resources in experimental minilandscares on the fitness of two populations of *Trichogramma cacoeciae*. - **Victor Burte**
- 11:15
- Behavioural ecology - Session #2**
- Location: Salle 92
- 11:15 Fitness consequences of personality convergence between partners of convict cichlid - **Chloé Laubu**
- 11:30 Revealing partial migration in African elephants - **Simon Chamaille**
- 11:45 Factors influencing female dispersal patterns in Western lowland gorillas - **Alice Baudouin**
- 12:00 Decision-making on space use negates dilution effect on vigilance - **Rémi Patin**
- 12:15 Strong seasonal and inter-annual fidelity in foraging areas of a mobile marine top predator, the grey seal - **Cécile Vincent**
- 12:30 Extra pair copulation drives the evolution of sex-biased dispersal. - **Thomas Brom**
- 12:45 Swimming speeds of Mediterranean settlement-stage fish larvae nuance Hjort's aberrant drift hypothesis - **Jean-Olivier Irisson**
- 13:00 Feeding habits of tow sharks species *Scyliorhinus canicula* (Linnaeus,1758) and *Galeus melastomus* (Rafinesque, 1810) in the Western Algerian coasts - **Ahlem Amina Taleb Bendjab**
- 13:06 Seabirds and fisheries: a modern toolbox to study an ancient relationship facing new challenges. - **Tangi Le Bot**
- 11:15
- Symposium - Ecological impacts of climate change in Polar Regions**
- Location: Salle 120
- 11:15 Ecoregionalisation of the Southern Ocean and the robustness of species distribution models in the context of climate change - **Thomas Saucède**
- 11:35 Arctic seabirds versus climate change: a scientific Epos across the North Atlantic - **David Grémillet**
- 11:55 Spatial ecotoxicology under climate change: Tracking mercury contamination across Arctic marine food webs - **Jerome Fort**
- 12:15 The implications of climate change for native insects and insect invasion potential at the subantarctic islands - **David Renault**
- 12:35 Mitochondrial phenotypic flexibility in king penguins: influence of nutritional status and marine life. - **Damien Roussel**
- 12:55 Host-parasite systems in polar areas as models to explore inter-specific dynamics in spatial contexts - **Thierry Boulinier**

11:15

Ecosystems functioning and dynamics - Session #4

Location: Saint Jean

- 11:15 Decode the sentinels' signals: how watersheds influence the functioning of high alpine lakes - **Coralie Jacquemin**
- 11:30 Sentinel lakes: a network for the study and management of mountain lakes in the French Alps - **Carole Birck**
- 11:45 The PLANQUA platform: a cutting-edge experimental infrastructure for multi-scale studies on aquatic ecosystems - **Sarah Fiorini**
- 12:00 Dike fields connectivity and diversity: a complex functioning on the Rhone River - **Maxine Thorel**
- 12:15 Ultimate colimitation of oceanic primary production - **Anne-Sophie Auguères**
- 12:30 Is litter decomposition driven by biomass-ratio or functional diversity ? - **Anne Bonis**
- 12:36 Phenotypic correlates of resource uptake rate in a population of litter-feeding detritivore - **Thibaut Rota**
- 12:45 Roles of earthworms species in the organic matter recycling - **Kevin Hoefnner**
- 12:51 Photoprimering of leaf litter for microbial degradation varies by litter type in an arid ecosystem - **René Guénon**
- 13:00 Caractéristiques et Influence de la flore ligneuse dans la production des parcs à base d'anacardier dans le Baïlantacounda (Casamance/Sénégal) - **Seydou Ndiaye**

11:15

Restoration ecology - Session #2

Location: Joliette

- 11:15 Transforming phytotoxic mine residues into soil - **Pierre Hennebert**
- 11:30 Ecological engineering tools to restore trace metal and metalloid polluted soils in Mediterranean protected areas - **Isabelle Laffont-Schwob**
- 11:45 Thinking 'allelopathy' and 'phenology' to enhance ecological restoration success: the case of Upper Rhin floodplain projects - **Isabelle Combroux**
- 12:00 Global study of ecosystem dynamics in a context of ecological restoration by sediment recharges and bank erosion in the Upper Rhine River. - **Cybille Staentzel**
- 12:06 Afforestation of old industrial disturbances: evaluation of aspen seedling characteristics for competitive sites - **Kyle Le**

11:15

Evolutionary ecology - Session #2

Location: Grand Large

- 11:15 Maladaptive evolutionary shifts in life history in a changing climate - **Ophélie Ronce**
- 11:30 Genotype mixtures as a tool to develop sustainable agriculture: elucidating the mechanisms that drive genotypic interactions in durum wheat - **Hélène Fréville**
- 11:45 Genomics of niche evolution: tracking the emergence of plant parasitism and mycoheterotrophy - **Cristina Roquet**
- 12:00 Arrhenotokous parthenogenesis & mate-finding Allee effect in parasitoids - **Thierry Spataro**

- 12:15 Evolution of diet specialization among life stages with antagonistic-mutualistic shift: implications for community dynamics - **Aurore Picot**
- 12:30 Eco-Evolutionary responses to global change in a clonal population: role of epigenetics and non-genetic inheritance - **Arnaud Sentis**
- 12:45 Resolving the evolutionary history of New Guinea crowned pigeons and its implication for taxonomy and conservation - **Jade Bruxaux**
- 12:51 Experimental evolution of zinc tolerance and hyperaccumulation in *Noccaea caerulescens* - **Julien Nowak**

11:15

Symposium - Advances in landscape ecology

Location: Gastaud Amphitheater

- 11:15 Adaptation and adaptedness of organisms: expanding fundamental knowledge by studying urban landscapes - **Mark McDonnell**
- 11:45 Gene flow and landscape ecology - **Michel Baguette**
- 12:05 Advances in landscape ecology in urban areas - **Solène Croci**
- 12:25 Changes in thermal conditions: their influences on individual dispersal abilities and the consequences for functional connectivity - **Thomas Delattre**
- 12:45 Landscape ecology contribution to ecotoxicology studies - **Clémentine Fritsch**
- 13:05 Managing landscape spatio-temporal heterogeneity for biodiversity conservation - **Clelia Sirami**
- 13:25 Reconciling drainage basin and landscape approaches to improve water quality - **Gilles Pinay**

11:15

Socio-ecosystems and ecological services - Session #2

Location: Estaque

- 11:15 Biodiversity loss, ecosystem service debt, and the sustainability of social-ecological systems - **Anne-Sophie Lafuite**
- 11:30 Beyond yield: balancing ecosystem services in harvested predator-prey communities - **Eric Tromeur**
- 11:45 Exploring the relationship between ecological communities and ecosystem services diversity in Europe: are common bird and butterfly functional traits good proxies? - **Karine Princé**
- 12:00 Are farmers interested in involving landscape complexity in their pest regulation strategies? - **Nicolas Salliou**
- 12:15 Ecosystem services supply trends in the Mediterranean Basin - **Ilse Geijzendorffer**
- 12:30 What is the value of ecosystem services provided by coralligenous habitats ? - **Laure Thierry De Ville D'Avray**
- 12:45 Fodder (ecosystem service) management in and around Ayubia National park, Pakistan - **Asma Jabeen**
- 12:51 Mobilization of the ecosystem services concept for integrated regional management: an application for the Grenoble urban region (France) - **Adeleine Bierry**
- 13:00 Regional specific farming systems and ecosystem services tradeoffs: a Tunisian case study - **Ana Paula García Nieto**

11:15

Macro-ecology & biogeography - Session #1

Location: Lacydon

- 11:15 On the global relationships between vertebrate evolutionary history and productivity - **Wilfried Thuiller**
- 11:30 Identifying «hotspots» of diversity for conservation: taxonomy, phylogeny and ethnobotany in the Flora of Socotra Archipelago - **Marine Pougé**
- 11:45 Disentangling local adaptation and phenotypic plasticity in trees using national forest inventories - **Thibaut Frejaville**
- 12:00 Patterns of endemism and species diversification in the Alps - **Jan Smycka**
- 12:15 The centre-periphery hypothesis: new insights from an old biogeographical paradigm - **Guillaume Papuga**
- 12:30 Cold tolerance, niche conservatism, and the phylogenetic structure of grass assemblages worldwide - **Anne-Christine Monnet**
- 12:45 Large-scale decline of bats and bush-cricket revealed thanks to automatic acoustic monitoring scheme. - **Yves Bas**
- 12:51 Birds community structure through available energy in french ecosystems - **Claire Lorel**
- 13:00 The spatial structure of European vertebrate trophic webs. - **Joao Braga**

14:30

Plenary - Microbial life through the lens of molecules - Purificación López-García

Location: Auditorium

15:45

Symposium - Connectivity dynamics: patterns, processes, predictions

Location: Gastaud Amphitheater

- 15:45 A conceptual framework for understanding movement decisions in dynamic landscapes - **Mueller Thomas**
- 16:00 Analyzing landscape impacts on effective dispersal - **Niko Balkenhol**
- 16:15 The use of a movement simulator improves estimates of landscape connectivity - **Aurélie Coulon**
- 16:30 From individual movement decisions to population abundance patterns - **Jonathan Potts**
- 17:00 Spatio-temporal graphs to assess connectivity in dynamic landscapes - **Franck Jabot**
- 17:15 Examining the impact of alternative climate change adaptation strategies on range shifting ability and persistence in a fragmented landscape - **Justin Travis**
- 17:30 From simulated land use change to changes in the structure of habitat networks - **Cecile Albert**

15:45

Agricultural ecology - Session #3

Location: Auditorium

- 15:45 Effect of plant diversity on above and below ground food webs, perspectives to enhance pest regulations in agroecosystems - **Charlotte Poeydebat**
- 16:00 Effect of resource levels (fertilization) on epidemics and crop pathogen evolution - **Pierre-Antoine Precigout**
- 16:15 Can carabid beetles be potential predators of the olive fruit fly Bactrocera oleae? A lesson from olive orchards and woody semi-natural habitats in Tuscany, Italy. - **Alice Albertini**
- 16:30 Mustard covers around cereal crops: Increasing winter parasitism of aphid pests - **Maxime Damien**
- 16:45 Causes and consequences of arthropod diversity in a tropical agroecosystem: implications for conservation biological control - **Maxime Jacquot**
- 17:00 Impact of agro-ecological infrastructures on the biological control of *Dysaphis plantaginea* (Hemiptera: Aphididae) in apple orchards in north-western France. - **Laurence Albert**
- 17:06 Pest damage in mixed forests: disentangling the effects of neighbour identity, host density and host apparency at different spatial scales - **Bastien Castagnéyrol**
- 17:15 Microbial volatiles organics compounds (mvocs) emitted from soils amended with organic wastes - **Leticia Abis**
- 17:21 Treatment and valorization of olive by-products through vermicomposting - **Barhoum Kharbouch**

15:45

Paleoecology

Location: Salle 92

- 15:45 Palaeoenvironmental changes and Meso-Neolithic human-landscape interaction in the Caspian coast - **Suzanne Leroy**
- 16:00 Long-term aquatic dynamics of alpine lakes (L. Allos and Petit; 2200 m a.s.l) during the Holocene and their close links with terrestrial ecosystems - **Rosine Cartier**
- 16:15 Champagne wines before champagne: a morphometric perspective - **Vincent Bonhomme**
- 16:30 Multi-proxies and benthic foraminifera approach as indicator of past eutrophication events from the west French coast. - **Clémence Caulle**
- 16:45 Precipitation Reconstruction from Tree Rings for the Aures Region in Northern Algeria - **Said Slimani**
- 17:00 Emergence and fragility of a remarkable Corsican wetland: the contribution of palaeoecology - **Yoann Poher**
- 17:15 Hydroclimatic changes in Talesh Mts, NW Iran, during the last 15,000 years, based on a chironomid analysis. - **Cyril Aubert**

15:45

Symposium - Microbiota under omics spotlights

Location: Salle 120

- 15:45 Domestication of viruses by parasitic wasps to deliver virulence molecules and impact on lepidopteran genomes - **Jean-Michel Drezen**

16:05	Bacterial "social" network in French soils: a Metagenomics insight. - Nicolas Chemidlin Prevost-Boure	17:15	The wolf, the wild boar and the media: how semantic plurality and scientific publicization impact human-wildlife conflict mitigations. - Marie Chandelier
16:25	Multi-omics insight into marine plankton diversity : Tara Oceans - Eric Pelletier	17:30	Charismatic species: who are they? - Céline Albert
16:45	Metagenomics of insect-symbiont interactions - Jean-Christophe Simon	17:36	Comment choisit-on la recherche que l'on mène en écologie? - Claire Damessin
17:05	Metagenomics of freshwater microbialites - Aurélien Saghaï	15:45	
17:25	Niche construction of the pathogen Agrobacterium tumefaciens in plant host: a functional genomics insight - Denis Faure		Global change - Session #2
15:45			Location: Lacydon
	Conservation biology, policies and management - Session #3	15:45	Climate change threatens the worldwide fish fauna - Lise Comte
15:45	Evaluating the European Habitat Conservation Policy - Yves Meinard	16:00	Extreme drought on grasslands: presence of Trifolium repens promotes aboveground recovery through complementarity effects - Pauline Hernandez
16:00	Biodiversity in "economy vs nature" dilemmas: analysis of public and private attitudes and decisions in two environmental conflicts in Southern France metropolitan area - Nathalie Boutin	16:15	The impacts of ENSO on the methane emissions of tropical wetlands - Changhui Peng
16:15	Naturalness assessment, a tool to link efficiently paleoecology and conservation - Vincent Robin	16:30	Climatic variability leads to temporal changes in forest communities through effects on both environmental and biotic assembly processes. - Mickael Chauvet
16:30	The presence of scientific ecology in the encyclical letter Laudato si - Fabien Revol	16:45	Effect of elevated CO ₂ and temperature on abiotic and biologically-driven basalt weathering and C sequestration - Sabrina Juarez
16:45	Biodiversity Conservation and Global Change: A Political Ecology of Adaptation Policies in Southern France - Raphaël Mathevret	17:00	Direct and indirect effects of glaciers on aquatic biodiversity in high Andean peatlands - Estefania Quenta Herrera
17:00	A tale of two diversities - Charles Fignières	17:15	Climate change, the Paris Agreement thresholds and Mediterranean ecosystems - Joel Guiot
		17:30	Presentation of the Laboratory of Excellence OT-Med : Objectiva Terra - Mediterraneum - Joel Guiot

- 17:36 Tree-Rings to Climate relationships in *Pinus nigra* Arn at Souiniet experimental site in Northwestern Tunisia. - **Sondes Fkiri**

15:45

Biological invasions - Session #3

Location: Joliette

- 15:45 Host range expansion is density dependent - **Bastien Castagneyrol**
- 16:00 Habitat quality and the velocity of spatial population expansion - **Marjorie Haond**
- 16:15 Using simulation to infer key parameters of the black rat colonization in Senegal during the elapsed century - **Jean Le Fur**
- 16:30 Parasite-mediated difference in functional response between invasive and native freshwater amphipods - **Vincent Médoc**
- 16:45 Mitigated predation impact of cats on continental biodiversity - **Delphine Ducros**
- 17:00 Contemporary evolution of immunity during range expansion of two invasive rodents in Senegal - **Christophe Diagne**
- 17:15 Climate constrains range expansion of a population diverging under allochrony : the case of the pine processionary moth - **Martin Godefroid**
- 17:30 Thirteen years after the first record of the Asian Longhorned Beetle in Europe : a preliminary analysis of the invasion history. - **Marion Javal**

15:45

Population and community ecology - Session #3

Location: Grand Large

- 15:45 When citizens and scientists work together : a french collaborative science network on earthworms communities distribution - **Muriel Guernion**
- 16:00 New metrics of species' ecological niche to assess relationships between biodiversity and ecosystem processes - **Guillaume Decocq**
- 16:15 Diversity - stability relationship: from theory to natural communities - **Théophile Olivier**
- 16:30 Community ecology of the coralligenous assemblages using a metabarcoding approach - **Aurélien De Jode**
- 16:45 Diet composition and habitat use of wintering Montagu's Harriers in West Africa - **Ben Koks**
- 17:00 Fitness consequence of small population size in academia - **Xavier Faugergue**
- 17:15 Species composition, relative abundance and habitat association of Waterbirds in the Sahara wetlands of Algeria - **Ettayib Bensaci**
- 17:30 Evidence of group tenacity in a colonial breeder with weak site philopatry - **Charlotte Francesiaz**

15:45

CESAB: Using our treasure trove of knowledge to confront complex ecological questions - Session

Location: Estaque

- 15:45 IRBAS: intermittent river biodiversity analysis & synthesis - **Thibault Datry**

ORAL PRESENTATIONS: THURSDAY 27 OCTOBER

- 16:00 Using metacommunity graphs to address multiscale biodiversity dynamics - application to French meadows. - **Pierre Denelle**
- 16:15 Global patterns of insect diversity, distribution and evolutionary distinctness - **Carlos Lopez-Vaamonde**
- 16:30 Disentangling the linkages between biodiversity and emerging infectious diseases - **Jean-François Guégan**
- 16:45 How local-scale processes build up the large-scale response of butterflies to global changes - **Reto Schmucki**
- 17:00 Feedbacks of a couple of eco-informatic tools for soil invertebrate functional traits: an example of interoperability by semantic data integration - **Johanne Nahmani**
- 17:15 NETSEED : a cross-disciplinary project to analyse how small farms contribute to global agrobiodiversity - **Mathieu Thomas**
- 17:30 Biological invaders in food webs - **Patrice David**
- 17:45 Origin and congruence of taxonomic, phylogenetic, functional and paleoecological diversity patterns: the model of European-Mediterranean woody plant biodiversity - **Arndt Hampe**
- 18:00 African rain forest dynamics: interactions between ecological processes and conservation actions - **Thomas Couvreur**
- 18:15 Community Assembly on Remote Islands: Does Equilibrium Theory Apply? - **Christophe Thebaud**
- 18:30 Reef fish, "new comers" in macro-ecology - **Michel Kulbicki**

8:45

Plenary - Release or restore ecosystems? - Thierry Dutoit

Location: Auditorium

10:45

Symposium - Conservation of biodiversity in the Mediterranean: how to link science and policy?

Location: Gastaud Amphitheater

10:45 Science-policy interface for biodiversity conservation: Bridging the knowledge gap, complying with a scientific imperative or preventing an environmental decline? - **Audrey Coreau**

11:00 Critical limits to environmental change for the Mediterranean Region - **Wolfgang Cramer**

11:15 Development of agriculture in the S-Mediterranean basin. - **Mélanie Requier-Desjardins**

11:30 The Mediterranean Wetland Observatory: a link between science and policy - **Christian Perennou**

11:45 Assessment of land - use changes in Mediterranean wetlands - **Anis Guelmami**

12:00 Climate change and mediterranean wetlands: which constraints for wintering waterbirds? - **Elie Gaget**

12:15 Ecological services in the Mediterranean wetlands - **Ozge Balkiz**

10:45

Urban ecology - Session #1

Location: Saint Jean

10:45 Technosols colonization by macrofauna and vegetation - **Charlotte Pruvost**

- 11:00 Earthworms of urban parks in a Mediterranean context: effects of management, park age and landscape - **Alan Vergnes**
- 11:15 Les solutions fondées sur la nature en milieu urbain : propositions, retours d'expériences et analyse comparative - **Marc Barra**
- 11:30 Multiscale effects of landscape on flower-feeding insects in the region Ile-de-France - **James Desaegher**
- 11:45 Plant species variations in common herbaceous patches along an urban-rural gradient - **Arnaud Cochard**
- 12:00 Validation of ecological connectivity model predictions in urban areas: replicated landscape genetic study on the land snail *Cornu aspersum* - **Manon Balbi**
- 12:15 Using Species Distribution Models with non-equilibrium species: the case of spreading bird species in the town of Marseille, France - **Marine Le Louarn**
- 12:21 Ecological role and perception of wastelands in cities - **Sébastien Bonthoux**
- 12:30 Agronomic fertility of dam sediment for soil construction in urban greening - **Gaëtan Fourvel**
- 12:36 Indicateurs d'état de santé de la faune et la flore en Ile-de-France : les sciences participatives comme support d'un observatoire régional - **Audrey Muratet**
- 10:45 Networks and biotic interactions - Session #1
- Location: Salle 92

- 10:45 Stoichiometry as an interaction trait in a multitrophic system - **Sylvain Coq**

- 11:00 The spatial scaling of food web structure - **Nuria Galiana**
- 11:15 Prey parasitism affects predator-prey dynamics and the evolution of predator foraging - **Loïc Prosnier**
- 11:30 Interactions between habitat use, isotopic niche variation and overlap among fish species in a temperate semi-enclosed sea - **Carolina Giraldo**
- 11:45 Belowground competition induced by a wind-pollinated species influences attractiveness of an insect-pollinated plant, *S. alba*, to wild pollinators. - **Floriane Flacher**
- 12:00 Study of the preference-performance relationship in generalist parasitoids - **Lucie Monticelli**
- 12:15 Concomitant decline in floral resources and wild bees in Belgium: insights from historical time series - **Floriane Jacquemin**
- 12:21 Are mycorrhizal-bacterial community networks impacted by the sexual type of their host tree? - **Hervé Sanguin**
- 12:30 FlorAbeilles: a database studying plant-bees relationships - **Clémentine Coiffait-Gombault**

10:45

Symposium - Chemical Mediation in Ecosystems

Location: Salle 120

- 10:45 Can plants multitask? Interactions between aboveground and below-ground herbivore-induced plant responses - **Nicole Van Dam**
- 11:15 Converging strategies in plant-manipulating insects: insect-induced effects on plants and possible mechanisms used by leaf-miners to manipulate their host-plant - **David Giron**

11:30	Chemical Ecology of Marine Fungi - Soizic Prado	12:15	Drivers of ground beetle richness and activity-density in woody elements of two contrasted agricultural landscapes in North France - Vincent Le Roux	
11:45	Chemical defenses under stress - Martin Wahl	12:21	Bird functional insectivory and landscape complexity in vineyard agroecosystems - Luc Barbaro	
12:15	The ecology of chemical-defense polymorphisms in crop plants - Doyle McKey	12:30	Impact of root profile on soil microbial functioning: what are the consequences for belowground ecosystem services? - Yogan Monnier	
12:30	Chemical ecology of freshwater macrophytes: Limited or unexplored allelochemical interactions? - Elizabeth Gross			
10:45	Agricultural ecology (and landscapes) - Session #4			
	Location: Estaque			
10:45	How does connectivity of permanent grasslands influence bird and plant communities? - Joséphine Pithon	10:45	Evolutionary ecology - Session #3	
11:00	Landscape heterogeneity related to organic and conventional farming systems: effects on natural enemies of crop pests and pest predation levels - Stéphanie Aviron	11:00	Location: Grand Large	
11:15	A Bayesian hierarchical model to estimate natural enemies' movements between hedgerow and apple orchard based on immunological marking. - Manon Lefebvre	11:15	Adaptation to a stress gradient of elevation in the alpine plant <i>Arabis alpina</i> - Pierre De Villemereuil	
11:30	Exploring the link between response to habitat fragmentation and pollination efficiency in wild bee communities: a trait-based approach - Romain Carrié	11:30	Evaluation of genetic variability and local adaptation of silver fir (<i>Abies alba</i>) from reciprocal transplant experiments over 3 altitudinal gradients - Anne Latreille	
11:45	Plant functional trait diversity in wild-flower strips: the key to promote pollinators in agricultural landscapes? - Roel Uyttenbroeck	11:45	When the relatedness of your neighbour matters: kin selection through facilitation in trees - Irène Till-Bottraud	
12:00	Patch dynamics as principal driver of weed species assembly - Lucie Mahaut	12:00	Conserved genetic architecture of morphological and life-history traits across four wild populations of Blue tit - Boris Delahaye	
			Diversification, evolution of floral traits and integrative taxonomy of the <i>Pseudophrys</i> section (Orchidaceae) - Nina Joffard	
			Testing options for adaptive forest seed sourcing under climate change using individual based models - Richard Whittet	

12:15	Metabolites relating to phenotypes and environments: between-population differentiation within species - Françoise Hennion	12:21	Spatial variability of the circa-littoral bioconstructed communities between the northern and the southern coasts of the western basin of the Mediterranean sea. - Selmane Sakher		
12:21	A test for pollinator mediated selection on floral traits in two Iris species - Eric Imbert	12:30	Species distribution modeling and the heterogeneity of Antarctic biodiversity data - Salomé Fabri-Ruiz		
12:30	Inbreeding depression and selective history in <i>Noccaea caerulescens</i> - Mathilde Mousset	12:36	Species distribution 2.0: An accurate time- and cost-effective method of prospection using street view imagery - Laurent Hardion		
10:45	Macro-ecology & biogeography - Session #2				
Location: Lacydon					
10:45	Niche width impacts vertebrate diversification - Jonathan Rolland	10:45	Parasites, pathogens and disease - Session #1		
11:00	Global patterns in predation pressure on sea urchins - Hannah Sheppard Brennan	11:00	Location: Joliette		
11:15	Explaining the global bird migration system from first principles using a process-based model - Marius Somveille	10:45	Exposure of Yellow-legged gulls to <i>Toxoplasma gondii</i> along the Western Mediterranean coasts: tales from a sentinel - Amandine Gamble		
11:30	Relevant spatial scales when upscaling larval transport into a connectivity matrix to forecast marine population density distribution: the <i>Eunicella singularis</i> study case in the Gulf of Lion (NW Mediterranean) - Katell Guizien	11:00	Resource quality modulates both infection success and intensity in the amphipod <i>Gammarus pulex</i> infected by an acanthocephalan parasite. - Kevin Sanchez-Thirion		
11:45	How connectivity promotes biodiversity in the face of global changes. - Romain Lorrilliere	11:15	Co-evolutionary process occurring in Sympatric / Allopatric Immune response in <i>Biomphalaria glabrata</i> / <i>Schistosoma</i> interactions - Anaïs Portet		
12:00	Freshwater gammarids (Amphipoda) from Crete and Peloponnese ,& the study of the diversity and origin of insular freshwater fauna - Kamil Hupalo	11:30	Cross-feeding of algal and anaerobic microbiota in the digestive system of a marine herbivore - Angélique Gobet		
12:15	Local dynamics slow the response of species ranges to climate change in eastern North American forests - Matthew Talluto	11:45	Impact of climate change on the dynamics of forests pests in Algeria - Gahdab Chakali		
		12:00	Diversity and impact of the beetle on the forest stands of Aleppo pine (Djelfa - Algeria) - Houda Deroueche		

- 12:15 Drivers of Foot and Mouth Disease in cattle at wild/domestic interface: insights from farmers, buffalo and lions - **Eve Miguel**

14:00

Plenary - Networks of interactions in ecology - **François Massol**

Location: Auditorium

15:15

Genetics and molecular ecology - Session #2

Location: Lacydon

- 15:15 Monitoring population dynamics of a cryptic biological indicator of managed forest using non-invasive genetics. - **Pierre-Loup Jan**
- 15:30 Molecular mechanisms of trans-generational immune priming in invertebrates - the case study of the mealworm beetle. - **Guillaume Tetreau**
- 15:45 Adaptive genomics in a natural population of *Arabidopsis thaliana*: a resurrection study in a spatially heterogeneous environment - **Léa Frachon**
- 16:00 A biogeographical inquiry to decipher the ecological status of carob populations (*Ceratonia siliqua* L., Leguminosae) and their history prior to Mediterranean civilizations - **Juan Viruel**
- 16:15 New genomic tools to explore the evolutionary history of African rainforest trees - **Jérémie Migliore**
- 16:30 TiO₂ nanoparticles alter iron homeostasis in *Pseudomonas brassicacearum* as revealed by PrrF sRNA modulation - **Wei Liu**

- 16:45 QTL mapping for zinc tolerance at the intra-specific level in *Arabidopsis thaliana* using a F₂ progeny - **Marie-Joe Karam**

15:15

Parasites, pathogens and disease - Session #2

Location: Grand Large

- 15:15 Antimicrobial resistances in wildlife: insights from a Mediterranean biodiversity hotspot, the Camargue (Southern France). - **Marion Vittecoq**
- 15:30 Antibiotics prevalent in European surface waters induce bacterial adaptation - **Marie-Claire Danner**
- 15:45 {GEN x EPI} x E => P: A systems approach to (epi)genetic inheritance and evolution - **Christoph Grunau**
- 16:00 The microbiota as a bacterial passport? Community structure and major players in the terrestrial isopod microbiome - **Didier Bouchon**
- 16:15 Testing a vaccine against avian cholera in albatrosses: combining observational and experimental data in a remote seabird community - **Vincent Bourret**
- 16:30 Diversity and evolution of Sinaivirus and related viruses in honeybees and wild hymenoptera - **Elisabeth Herniou**
- 16:45 Why is there no effect of host species on the physiological thermotolerance of generalist parasitoids? - **Joan Van Baaren**
- 17:00 Dynamics of the liver flukes in a highly anthropized system: the Camargue - **Emeline Sabourin**
- 17:06 New results in invertebrate pathogens recognition: a new approach supporting new concepts ? - **Silvain Pinaud**

15:15

Networks and biotic interactions - Session #2

Location: Salle 92

- 15:15 The empty and unstable forest: habitat loss effects on multitrophic communities - **Daniel Montoya**
- 15:30 Combining a molecular diet analysis (NGS) and biotraits of prey community to refine the habitat selection of a predator. The case of the endangered Pyrenean desman (*Galemys pyrenaicus*) - **Marjorie Biffi**
- 15:45 Effect of depth gradients on fish trophic relationships in the English Channel - **Pierre Cresson**
- 16:00 Nutrient recycling in complex food web models - **Pierre Quévreux**
- 16:15 Novel metacommunity modelling approaches highlight the importance of biotic interactions on the speed of the temperate biome shift in response to climate change. - **Isabelle Boulangeat**
- 16:30 Impact of ozone pollution on chemical communication in a highly specialized plant-pollinator interaction - **Magali Proffit**
- 16:36 Laboratory and field studies on the interaction between kelps and filamentous algal endophytes - **Miriam Bernard**

15:15

Chemical Mediation in Ecosystems - Session #1

Location: Salle 120

- 15:15 Does the metabolome of a drought-resistant species shift under water stress over the seasonal cycle? - **Amélie Sauzier**

15:30

How environmental changes interact to shape non-vascular and vascular plant allelochemical interactions in terrestrial ecosystems ? - **Geneviève Chiapusio**

15:45

Predator-prey interactions in a changing world: humic stress suppresses predator cue perception in copepods - **Mathieu Santonja**

16:00

Long distance interaction between cave-dwelling sponges and crustaceans mediated by chemical cues - **Marie Le Croller**

16:15

Intriguing chemical mediation between the European palm and its specialized pollinator - **Mathilde Dufay**

16:30

Understanding how herbivorous insects specialize by studying the evolution of chemosensory perception - **Coline Jaworski**

16:45

Exploring the role of aldehyde-based signaling during kelps/herbivores interactions - **Léa Cabioch**

17:00

Rose floral scent - **Sylvie Baudino**

17:15

Chemical cues affect the feeding choices in lichen-snail trophic interactions - **Alice Gadea**

15:15

Symposium - Ecological and biogeographical consequences of global change on insular biodiversity

Location: Saint Jean

15:15

Contrasted populations dynamics of orchid species between insular and continental situations - **Bertrand Schatz**

15:45

Global patterns in extinction and threats to vertebrates by biological invasions in islands. - **Celine Bellard**

16:15	Islands, mainland and terrestrial fragments: how isolation shapes plant diversity. - Emi Martin-Queller	16:45	Where implant wind turbines and their offset measures in a farming landscape to mitigate the negative impacts of the establishment on bats? - Kévin Barré
16:35	Interactions between non-native predators and human-induced ecological disturbance: implications for conservation of island biodiversity in the Mediterranean - Lise Ruffino	17:00	Around the No Net Loss debate: how stakeholder agreements may interfere with biodiversity conservation? - Julie Latune
16:55	Salar de Uyuni (Bolivia): Unique island biodiversity challenged by tourism and agriculture - Arthur Sanguet		
15:15		15:15	
Conservation biology, policies and management - Session #4		Symposium - Effects of semi-natural habitats on pest insects and natural enemies	
Location: Gastaud Amphitheater			
15:15	Fruit set in European orchids: a bridge between evolutionary ecology and conservation - Iris Le Roncé	15:15	Pest-natural enemy interactions in a landscape context - Felix Bianchi
15:30	The deforestation process in the southern amazon and framework to develop and implement sustainable alternatives: a research proposal - Lisandro Botelho	15:45	Predation rate of pests and natural enemies in crops across nine European case studies: the role of semi-natural habitats - Philippe Jeanneret
15:45	Balancing economic costs and ability to detect change in survival for optimising capture-recapture surveys of long-lived birds - Nicolas Lieury	16:00	Landscape potential in pollen provisioning for beneficial insects favours biological control in crop fields - Aude Vialatte
16:00	Subtle temperature variations drive nesting habitat preference for white-backed vultures (<i>Gyps africanus</i>) in Hwange national park, Zimbabwe - Blessing Kavhu	16:15	The effect of field margin vegetation on the regulation of crop herbivores in two winter crops - Anna Pollier
16:15	Trading reproduction for survival in the wild? Comparative analyses of raptor populations reveals no evidence for life-history tactics. - Jabi Zabala	16:30	Interest of a trait-based approach to understand plant-arthropod interactions in agroecosystems and implications to improve conservation biological control - Antoine Gardarin
16:30	Protecting the evolutionary and functional diversity of birds and mammals - Laura Pollock	16:45	Local and landscape scale effects on seed-eating carabids and levels of weed seed predation in arable fields - Sandrine Petit
		17:00	Landscape composition and farming practices affect the abundance of the codling moth and its predation and parasitism in apple orchards - Claire Lavigne

POSTER SESSIONS

Both poster sessions will take place in the Exhibition hall

Poster Session A : Tuesday 25 October	Poster Session B : Thursday 26 October
Topics associated :	Topics associated :
<ul style="list-style-type: none">• Agricultural ecology• Behavioural ecology• Biological invasions• Ecosystems functioning and dynamics• Global change• Population and community ecology• Restoration ecology• Soil ecology, biogeochemistry and plant-soil interactions	<ul style="list-style-type: none">• Chemical Mediation in Ecosystems• Conservation biology, policies and management• Ecophysiology• Evolutionary ecology• Genetics and molecular ecology• Landscape ecology• Macro-ecology & biogeography• Networks and biotic interactions• Parasites, pathogens and disease• Urban ecology• Paleoecology• Socio-ecosystems and ecological services

POSTER SESSION A : TUESDAY 25 OCTOBER

Agricultural ecology # Poster

AE#P-1	Lupine Seeds as protein source in pig diets - Degola Lilija	AE#P-12	Weed diversity responses to crop sequence: a conceptual framework to test ecological predictions - Mahaut Lucie
AE#P-2	Field beans as protein source in feed ration for Boer goat - Aplocina Elita	AE#P-13	Long term influence of the Sélune river (France) on the organization of agricultural landscapes and vegetation communities - Alignier Audrey
AE#P-3	Etude de la biocénose viticole du nord algérien - Bissaad Fatima Zohra	AE#P-14	Does plant functional diversity in flower strips promote soil invertebrate diversity and ecological functions relationships in the adjacent rapeseed crop? - Zwicke Marine
AE#P-4	Strategy of biological control against pathogens of the main crops in Tlemcen region - Gaouar Benyelles Nassira	AE#P-15	Alfalfa management: an additive resource for pollinators - Mandel Amélie
AE#P-5	Présence myrmécologique dans deux stations différentes dans l'Algérois - Saidi Mahdia	AE#P-16	New high-tech method for assessing functional Arthropod biodiversity - Auger Jacques
AE#P-6	Biological regulations in response to local pesticide use and to the landscape context of fields: preliminary findings from the national SEBIOPAG network - Petit Sandrine	AE#P-17	Particularities of roots colonization by mycorrhizal fungi and diversity of indigenous arbuscular fungi in the rhizosphere of strawberry in morocco - Bahouq Madiha
AE#P-7	Etude de l'effet d'un insecticide Decis sur la biochimie et la chimie du sol - Tahar Wafa	AE#P-18	Growth and fruiting after mycorrhizal inoculation and fumigation effect on roots and mycorrhizal development of strawberry - Bahouq Madiha
AE#P-8	Champignons mycorhiziens à arbuscules indigènes un outil de biotechnologie appliquée sur les plants de pastèque - Hamza Nabila	AE#P-19	Study of the carabids-seeds interaction like a predator prey interaction - Deroulers Paul
AE#P-9	Effects of mixture diversity of winter wheat on carabids - Vergnes Alan	AE#P-20	Multiple parameters interact to determine fitness costs associated with resistance to genetically modified crops in an agricultural pest - Tetreau Guillaume
AE#P-10	Assessing the effect of herbicide on crop-weed interaction with weed-crop phylogenetic and functional similarities - Mahaut Lucie	AE#P-21	Impact du contenu polyphénolique sur la résistance à l'infestation fongique dans le grain de blé dur - Malika Barkat
AE#P-11	Effect of local landscape heterogeneity on crop colonization by natural predators of pests in protected horticultural cropping systems - Aviron Stéphanie		

AE#P-22	Composition and microbial activity of thymus ciliatus harvested during two stages of development - Touhami Aicha	BE#P-6	Régime trophique du chacal dore Canis aureus dans le parc national du Djurdjura - Djedjiga Oubellil
AE#P-23	Ecology and biodiversity of Araneida (Arthropoda, Arachnida) at an agricultural field of Algiers region - Kherbouche-Abrous Ourida	BE#P-7	Empirical testing of sexual selection's potential role on genitalia variation in the simultaneously hermaphroditic land snail <i>Helix aperta</i> (Pulmonata, Stylommatophora) - Abdelli Meriem
AE#P-24	Antibacterial and antifungal activity of phenolic compounds against pathogens of olive fruit (<i>Olea</i>) from western Algeria - Aissat Benali	BE#P-8	Auto-ecology and place of species Ruta gender in plant communities in north western Algeria. - Zineb Benaoum
AE#P-25	Biodiversité de trois milieux - Gherbi Rachida	BE#P-9	Group association at shore and genetic relatedness of returning swimming groups in chinstrap penguins - Lee Won Young
AE#P-26	Biodiversité des Mollusques Gastéropodes Terrestres dans le Nord-Est Algérien - Hamdi-Ourfella Amina Nawel	BE#P-10	Seed Dispersal and Germination Traits of 25 Plant Species Inhabiting the northern Sahara in Algeria - Trabelsi Hafida

Behavioural ecology # Poster

BE#P-1	Evaluation de la toxicité de deux pesticides chez un protozoaire cilié: <i>Paramecium</i> sp. - Sbartai Ibtissem	BE#P-11	Habitat selection and diving behaviour of the olive ridley sea turtle <i>Lepidochelys olivacea</i> along the Guiana coast during the inter-nesting period. - Giraudou Lucie
BE#P-2	?Eco-ethology of wintering the Common Teal <i>Anas crecca crecca</i> (Anatidae) in North-east of Algeria? - Khemis Mohamed Dhaya El Hak	BE#P-12	Morphological variability of the Atlantic horse mackerel <i>Trachurus trachurus</i> (Linnaeus, 1758) of the Algerian coast - Lyamine Mezedjri
BE#P-3	Methodology for the behavioral study of fish post-larvae on the Corsican coastline (east coast: Bastia) - Rossi Amélie	BE#P-13	Biodiversité des oligochètes terrestres dans la région d'Annaba: inventaire et biométrie - Habes Dahbia
BE#P-4	Diversity and structure of butterfly (Lepidoptera, Rhopalocera) in The region of M'sila (Algeria) - Ahmed Saad	BE#P-14	Larval exposure to azadirachtin affects oviposition site preference of <i>Drosophila melanogaster</i> - Samira Kilani-Morakchi
BE#P-5	Can winter diet and distribution explain differential survival between two morphs of the Common guillemot? - Albert Céline		

BE#P-15	Inventory of insects, foraging behavior and pollination effectiveness of honey bee (Hymenoptera: Apoidea) on Apricot (<i>Prunus armenica</i> L.) and Pear (<i>Pyrus communis</i> L.) in Constantine area (Algeria) - Bennachour Karima	BI#P-3	One can be enough: compared performances and defences between one widespread clone and native populations in a major invasive plant species - Rouified Soraya
BE#P-16	Ecologie de l'Erismature à tête blanche <i>Oxyura leucocephala</i> dans les zones humides de la Numidie algérienne - Chettibi Farah	BI#P-4	The potential of remote sensing for the mapping and monitoring of invasive alien knotweeds - Martin François-Marie
BE#P-17	Les requins en Méditerranée Marocaine - Hamdi Habiba	BI#P-5	Feral cat predation at a biodiversity hotspot scale: the case of the New Caledonian Archipelago - Palmas Pauline

Soil ecology, biogeochemistry and plant-soil interactions # Poster			
SE#P-1	Climate change simulation in peatland: characterization and spatio-temporal variations of sphagnum peroxidase activities - Criquet Steven	SE#P-10	Effects of increase in forest biomass export on soil fauna and associated functions - Elie François
SE#P-2	The red mud deposits: characterization and impacts on the physico-chemical and biological qualities of soils - Luglia Mathieu	SE#P-11	Using of the snail <i>Helix aspersa</i> (mollusc, gasteropod) as bioindicator of soil pollution in north-east of Algeria: growth and biomarkers - Sifi Karima
SE#P-3	Effet de l'azote du sol sur la fécondité de cochenille <i>Parlatoria ziziphi</i> (Lucas, 1853) Homoptera : Diaspididae) sur clémentinier à Rouiba (<i>Mitidja orientale</i> - Algérie) - Khaoula Aroua	SE#P-12	Impact de la décharge d'Oum Teboul sur le Lac Tonga - Zaafour Mohamed Djalil
SE#P-4	The Educational network on soil and plant ecology and management (EduSaPMan) - John Lena	SE#P-13	Effect of sugarcane conversion to organic farming on the abundance and biodiversity of soil invertebrates in Martinique Island (French West Indies) - Coulis Mathieu
SE#P-5	Contrasting spatial patterns and ecological attributes of soil bacterial taxa across french national territory - Karimi Battle	SE#P-14	Infra-red Spectroscopy as a useful tool to assess water availability in litters - Rebufa Catherine
SE#P-6	Plant interactions as biotic drivers of intraspecific variability in leaf litter traits and decomposability of a foundation tree species (<i>Quercus petraea</i>) - Henneron Ludovic	SE#P-15	Moisture adsorption and soil wettability in relation to water vapor pressure in arid and tropical zones - Amer Abdelmonem
		SE#P-16	Typologie des cours d'eau méditerranéens du massif ultrabasique de Beni Bousera et des sites adjacents (NW, Maroc) - Khadri Osama

- SE#P-17 A consistent set of thermodynamic data in the system FeO-Fe2O3-H2O-CO2-HCl-SO3 and application to estimation of stabilities of green rusts and fougereite - **Ben Nacib Jihaine**
- SE#P-18 Protection d'écosystème et étude hydrologique et Géochimique des eaux dans un sous bassin montagnard - la haute vallée de Tifnoute- (Haut Atlas Marocain) - **Kacem Lamyaa**
- SE#P-19 Evaluation de la qualite physico-chimique des eaux souterraines dans la région de Boumerdes - **Derbal Nassima**
- SE#P-20 Analyse floristique de la zone orientale de Chott Ech Chergui, Tiaret, Algérie - **Benkhetou Abdelkader**

POSTER SESSION B : THURSDAY 27 OCTOBER

Chemical Mediation in Ecosystems # Poster

- CME#P-1 Solvent free microwave extraction: an eco-friendly and rapid process for green isolation of essential oil from lemon grass - **Mohamed Nadjib Boukhatem**
- CME#P-2 Oil palm entomophilous pollination depends on an intersexual chemical mimicry - **Auffray Thomas**
- CME#P-3 Fractionation of Phenolic Compounds from Sonneratia apelata Pneumatophores and Test for Their Bioactivities - **Dao Van Tan**
- CME#P-4 Comparative effects of some ecdysteroid agonists on protein analysis in insects of different orders under in vivo conditions - **Kirane-Amrani Leila**
- CME#P-5 Interspecific interactions within the algal microbiota: quorum sensing and molecular communication between endophytic fungi and bacteria from brown algae - **Tourne-roche Anne**
- CME#P-6 The deadly nightshade Atropa belladonna, a nightmare for frugivorous species, the honeymoon for the invasive fly Drosophila suzukii - **Baltora Sylvie**
- CME#P-7 Effects of various Solanum leaf extracts and of isolated glycoalkaloids on the behavior of two aphids, Myzus persicae and Macrosiphum euphorbiae - **Baltora Sylvie**
- CME#P-8 Effets des rejets urbains et agricoles sur la biologie de Barbus setivimensis (Poisson, Cyprinidé) du réseau hydrographique de Oued El-Harrach (Nord de l'Algérie) - **Fergani Hamida**
- CME#P-9 Metabolomics and chemical ecology assays to understand mangrove ecosystem functioning in Vietnam - **Bousquet-Mélou Anne**
- CME#P-10 Chemical composition, antioxidant properties Lichen Roccella phycopsis Ach (Roccellaceae) in Northern Algeria - **Rafika Brakni**
- CME#P-11 Study of the chemical interactions in lavender decline - **Nicole Florence**
- CME#P-12 Direct and indirect effects of prescribed burning on secondary metabolism of three Mediterranean pine species - **Ormeno Lafuente Elena**
- CME#P-13 Volatile organic compounds emissions from cattle slurry on an agricultural soil - **Lafouge Florence**
- CME#P-14 Diagnostic and qualitative assessment of the extent of mercury contamination of surface water dam Zit-Emba wilaya of Skikda, North Eastern Algeria - **Belhadj Mohamed Zine**
- CME#P-15 Analyse des composés volatiles de deux plantes aromatiques endémiques par micro-extraction en phase solide (SPME) couplée par GC/MS - **Malika Barkat**
- CME#P-16 Effects of moulting hormone agonists (RH-5849) in *Ephestia kuhniella*: pupal development and reproductive capacity after treatment of males - **Selmane-Meskache Rania**
- CME#P-17 Multiple origin of pheromone precursors in *Drosophila melanogaster* - **Wicker-Thomas Claude**
- CME#P-18 Ozone uptake and deposition on soil surfaces - **Ciuraru Raluca**

- CME#P-19 Do litter-mediated chemical interactions play a role in Mediterranean oak regeneration? - **Gavinet Jordane**
- CME#P-20 Ecological responses and metabolism changes of *Lessonia spicata* upon grazing by herbivores - **Leblanc Catherine**
- CME#P-21 Effects of inhibitor of the angiotensin converting enzyme on the quality and quantity of ovarian proteins of the Mediterranean flour moth, *Epeorus kuehniella* Zeller - **Yezli-Touiker Samira**
- CME#P-22 The identification parameters of a chemostat by the LSCR method - **Borsali Salima**
- CME#P-23 Pest infestation and limited nutrient supply modify tomato leaf volatiles - **Becker Christine**
- CME#P-24 Ecology of Arsenic release and bioaccumulation (by algae, forage and food plants) in eutrophic lakes, harbors and rice fields - **Charlet Laurent**
- CME#P-25 Characterization and potential of naphtho-gamma-pyrone crude extract obtained from *Aspergillus niger* grown under solid state fermentation - **Carboue Quentin**
- CME#P-26 Brood of a chemically mimetic social parasite does not mimic host brood - **Bagnères Anne-Geneviève**
- CME#P-27 Toxic effects of Fenbutatin oxyde on *Paramecium* sp. with special emphasis on growth inhibition and induction of oxidative stress - **Benbouzid Houneida**
- CME#P-28 Heavy Metals in water and tissues of Cyprinids fish from K'sob Reservoir (M'Sila - Algeria) - **Fateh Mimeche**

- CME#P-29 Valorisation de la luzerne et du sorgho dans le traitement de sols et de boues pollués par les métaux lourds - **Amel Akli**

Conservation biology, policies and management # Poster

- CB#P-1 Les macroinvertébrés benthiques comme bioindicateurs pour évaluer l'état de santé de oued Tafna (Algérie) - **Mouna Hafiane**
- CB#P-2 Phytodiversité pré-forestière de la zone Ouest du Mont Chenoua - **Boulenouar Yacine**
- CB#P-3 SACOLEVE - Spatial and temporal Adaptation of a traditional Mediterranean fishery facing Regional Change: COmbining history and ecoLogy to study past, prEsent and future of sponge harVEsting - **Fourt Maïa**
- CB#P-4 Micropropagation of *Juniperus thurefera* by axillary shoot proliferation - **Khater Nadia**
- CB#P-5 Ecologists and landscape designers: How to develop a better operational collaboration ? - **Bonthoux Sébastien**
- CB#P-6 Citizen Science for CIGESMED: involving divers in marine ecological monitoring - **Gatti Giulia**
- CB#P-7 Bats and road collisions: building a risk prediction model incorporating landscape variables - **Roemer Charlotte**
- CB#P-8 Etude phytoécologique et préservation de la biodiversité de la zone humide de la Macta (Algérie occidentale) - **Belgherbi Benamar**

Ecophysiology # Poster	
CB#P-9	Genetic consequences of long-term isolation for the last french population of <i>Eryngium viviparum</i> , and implications for conservation - Pauline Rascle
CB#P-10	Biodiversity indicators based on several taxons help identify the range of pressures on coastal dunes - Revers Frédéric
CB#P-11	A rapid assessment method for assessing wetland functions - Gayet Guillaume
CB#P-12	From one engagement to another: motivations behing pro-biodiversity behaviours - Leve Marine
CB#P-13	Phylogeographic structure wiped out, species or subspecies status: what matters for conservation of the South African Oribi - Rastorgueff Pierre-Alexandre
CB#P-14	Evaluation de la qualité de l'eau et son impact sur l'environnement: exemple de l'écosystème lac des oiseaux - Algérie - Toumi Abir
CB#P-15	Détermination des zones marines potentielles importantes pour la conservation des oiseaux à l'ouest de l'Algérie - Taibi Ahmed
CB#P-16	Inferring the different facets of coralligenous biodiversity from imagery processing - Deter Julie
CB#P-17	Etude Bio-écologique de la sardine exploitée dans la zone de Casablanca - Abderrazik Wahbi
CB#P-18	Etude de la croissance d' <i>Engraulis encrasiculus</i> (Linnaeus, 1758) de la zone Atlantique centre marocaine (Cap Cantin-Cap Boujdor) - Baali Ayoub
E#P-1	Comprendre l'impact du changement climatique sur la biodiversité : l'Observatoire des Saisons Provence - Gachet Sophie
E#P-2	Physicochemical characterization of interactions "Metal - Algae" - Elhadj Zoubida
E#P-3	Maternal corticosterone deposition in avian yolk: influence of laying order and group size in a joint-nesting, cooperatively breeding species - Schmaltz Gregory
E#P-4	Concentration en cation des feuilles et capacité biochimique de la photosynthèse : Relation physiologique ou écophysiologique ? - Maire Vincent
E#P-5	Size structure and fertility of <i>Macrobrachium vollenhovenii</i> , giant freshwater prawn medium Ouémé delta (southern Benin) - Gangbe Luc
E#P-6	Influence des paramètres écologiques sur la micro-phytodermie de <i>Pistacia lentiscus</i> dans le Nord occidental oranais de l'Algérie - Tirse Malika
E#P-7	Impacts des activités anthropiques sur la qualité de l'eau et des poissons pêchés dans le complexe lagunaire lac Nokoué lagune de Porto-Novo - Vodougnon Hamil Bonard
E#P-8	The effect of temperature on growth performance and metabolism in juvenile Arctic charr, <i>Salvelinus alpinus</i> L. - Beuvard Christian
E#P-9	Variabilité génétique et tolérance à la sécheresse des provenances Méditerranéennes de pin pignon et de pin d'Alep - Benmna Amira

E#P-10	Adverse effects on fertility in male rat after exposure to a mixture of endocrine disrupting pesticides - Aiche Mohamed Amine	E#P-20	Association entre anomalies spermatiques et environnement professionnel chez les hommes consultant pour infertilité de couple - Sari-Minodier Irene
E#P-11	Thermal window for spawning sardine (<i>Sardina pilchardus</i>) in the south area off the Moroccan Atlantic coast - Abdelouahab Hinde	E#P-21	Assessment of photosynthetic resilience in Scots pines after a surface fire - Gette Irina
E#P-12	Modélisation du fonctionnement de la végétation Mesure des Echanges gazeux et Flux du CO ₂ dans une communauté végétale - Larouk Chafia	E#P-22	L'exposition subaiguë à de faibles doses de la métribuzine induit des altérations métaboliques chez les rats. - Yahia Elkhansa
E#P-13	An immunoenzymatic method to understand winter phenology and predict temperate trees responses to climate change - Duputié Anne	E#P-23	Comparative study of two low toxicity insecticides on the testicles of a major pest in stored products, <i>Ephestia kuehniella zeller</i> - Selmane Meskache Rania
E#P-14	Bioecology of donax trunculus (mollusc, bivalve) bioindicator species of pollution of Annaba gulf (Algeria): growth and index condition - Sifi Karima	E#P-24	Anti-implantation effect of the fungicides maneb and chlorothalonil in the female of rabbit and rat - Mallem Leila
E#P-15	Méta-analyse de l'influence des expositions professionnelles aux solvants sur les paramètres du sperme - Perrin Jeanne	E#P-25	In vitro toxicity of titanium oxide nanoparticles in <i>daphnia magna</i> upon chronic aqueous exposure - Djekoun-Bensoltane Samira
E#P-16	Effect of anthelmintics on plant proteome - Podlipna Radka	E#P-26	Evaluation of the harmful effects of lead on several biomarkers among factory workers of batteries - Mansouri-Bentayeb Ouarda
E#P-17	Biotransformation of flubendazole in <i>Arabidopsis Thaliana</i> : potential tool for detoxification in environmental - Stuchlikova Lucie	E#P-27	Ameliorative effect of (<i>Triticum durum</i>) on thyroid and reproductive functions of males albino rats induced with lead acetate - Mansouri-Bentayeb Ouarda
E#P-18	Lack of information received by a French women cohort regarding prevention against exposure to reprotoxic agent during pregnancy - Courbiere Blandine	E#P-28	The fungicide methyl thiophanate causes infertility in male rabbit <i>Cuniculus lepus</i> - Mallem Leila
E#P-19	The cnidarian <i>Hydra attenuata</i> , a pertinent freshwater animal for multi-scale biomarker investigations to assess chronic toxicity: a case study with Disperse Red 1 - Moreau Xavier	E#P-29	The molecule preserve environment: Effects of inhibitor of the angiotensin converting enzyme on development of the Mediterranean flour moth <i>Ephestia kuehniella Zeller</i> - Yezli-Touiker Samira

Evolutionary ecology # Poster

- EE#P-1 Challenges in estimating heritability of density-dependent polyphenism: insights from measured and simulated data from phase traits in the desert locust - **Jourdan Hélène**
- EE#P-2 Annual-ring width plasticity to climate of individual *Abies alba* trees along three altitudinal gradients - **Pichot Christian**
- EE#P-3 Testing the causal relationships proposed by the parental care model of the evolution of endothermy (Farmer, 2000) - **Clavijo-Baquet Sabrina**
- EE#P-4 Why mating ? Modelling the spread of a sex-strike allele in haplodiploids - **Tilquin Anaïs**
- EE#P-5 Integrative phylogeography of a widespread pest rodent in Morocco using genetic and morphological data - **Bouarakia Oussama**
- EE#P-6 Holocene biodiversity changes in Pontocaspian planktonic communities - **Sala-Perez Manuel**
- EE#P-7 Life-history trait variation among central and marginal plant populations - **Latron Mathilde**
- EE#P-8 Distribution of the White Stork (*Ciconia ciconia* L. 1758) in Algeria - **Mammeria Aicha Beya**
- EE#P-9 Characterization of Habitat of *Rhamnus alaternus* L. at the Jebel Tessala (North-Western Algeria) - **Benchiha Walid**
- EE#P-10 Phenotypic plasticity in reproductive traits of *Helix aperta* snails sampled during or after aestivation - **Tafoughalt-Benbellil Saida**

Genetics and molecular ecology # Poster

- GME#P-1 Assessment of genotoxic effects of a fungicide (propiconazole) on green frog tadpoles using alkaline-single-cell gel electrophoresis (comet assay) - **Bourenane Nazaïha**
- GME#P-2 Primary evaluation efficacy of different dna barcodes for identification of medicinal plants in vietnam - **Pham Thi Thu Hang**
- GME#P-3 moléculaire des Caractérisation *Miniopterus schreibersii* (Chiroptère: Miniopteridae) de l'Algérie. - **Derouiche Louiza**
- GME#P-4 A panel of microsatellites to individually identify feral cats from their scats: application to invasive mammal studies on islands - **Palmas Pauline**
- GME#P-5 The production and validation of metabarcoding data for studying the diet of invertebrate-eaters - **Meglecz Emese**
- GME#P-6 The Effect of Ocean Acidification on the Ability of the *Nereis* Species to Genetically Adapt - **Alsheikh Noha**

Landscape ecology # Poster

- LE#P-1 Land-use change in the Mediterranean environment: the case of the geosites of Murge (Apulia - Southern Italy) - **Greco Roberto**
- LE#P-2 NDVI estimation using normalized reflectance of Himawari-8/AHI data - **Seong Noh-Hun**
- LE#P-3 Estimation of Gross Primary Production using SPOT/VEGETATION over Korea - **Kim Honghee**

LE#P-4	Ecological analysis of desertification processes in semi arid land in algeria using satellite data - Zegrar Ahmed	MEB#P-5	Citizen science monitoring programs as a tool to reveal biogeographical patterns: the case of floricolous ants along latitudinal and urbanization gradients - Vergnes Alan
LE#P-5	Assessing the importance of field margin components and complexity in providing overwintering sites for flying predators - Blaix Cian	MEB#P-6	Water content monitoring using satellite data over the forests in Korea - Kwon Chaeyoung
LE#P-6	Detecting riparian forest in tropical forest: using canopy height raster LIDAR data - Rolle Laurie	MEB#P-7	A Correction of Satellite-based Vegetation Index using Temporal Variability Pattern - Jin Donghyun

- UE#P-12 Impact of urbanization on ecosystems forest in northern Algeria - **Boukraa Fouzia**

OPPA JUNIOR

L'Orchestre Philharmonique du Pays d'Aix Junior (OPPAJ)² est né d'une volonté d'offrir à tous les jeunes musiciens du territoire, dès leur 4ème année d'instrument et jusqu'à la fin de leur cycle 3, la possibilité d'avoir une pratique musicale au sein d'un grand orchestre symphonique.

Cette volonté est partie du constat que ce **programme de formation orchestrale** manquait sur le territoire et elle se concrétisa grâce à une rencontre déterminante avec le chef de l'**Orchestre Philharmonique du Pays d'Aix (OPPA), Jacques CHALMEAU**, bien connu sur le territoire puisque chargé de la mission de porter la musique symphonique jusque dans les coins les plus reculés, il s'y produit hiver comme été avec son orchestre

Sollicité par Sophie VALLAURI, présidente de l'association **Sasis ton kairos**, celui-ci a tout de suite accepté de mettre son énergie et ses compétences au service de jeunes musiciens amateurs, entraînant derrière lui l'adhésion des musiciens d'orchestre professionnels qu'il dirige et celle des collectivités territoriales.

Salué par la presse, l'**OPPAJ réunit désormais jusqu'à 100 jeunes musiciens de 10 à 20 ans issus des écoles de musique et conservatoires** et se produit en concert sur invitation de communes ou de grands théâtres comme le théâtre TOURSKY, le Grand Théâtre de Provence ou l'Opéra de Marseille.

Le succès et la force de cet orchestre de jeunes viennent de ses conditions de travail et des concerts qu'il donne. En effet, les musiciens de l'OPPAJ:

- sont sélectionnés lors d'une audition de recrutement
- travaillent des œuvres originales et non simplifiées
- sont encadrés par des tuteurs tous musiciens d'orchestre (l'Orchestre Philharmonique du Pays d'Aix dans lequel les petits de l'OPPAJ rêvent de rentrer un jour...) et souvent aussi pédagogues
- sont dirigés sous la baguette d'un chef professionnel qu'ils entendent régulièrement sur le Pays d'Aix ou lors de prestigieux festivals comme celui de la Roque d'Anthéron.
- se produisent en concerts sur tout le territoire, à l'image de leur grand frère l'OPPA. Cette formation musicale est une initiative quasi unique en France contrairement à ce qu'on peut observer en Allemagne ou dans les pays Anglo-saxons.

Les répétitions se déroulent sur Aix en provence **trois fois par an** pendant les vacances scolaires sous la forme de stages de **cinq jours consécutifs** au cours desquels tous les membres de l'**OPPA Junior s'exercent pendant 7H30 quotidiennement** en partiels, tutti et travail individuel, dans une ambiance agréable ponctuée de parties de ping-pong et de moments de détente inoubliables. Il en ressort du pur bonheur pour les apprentis musiciens.

DELEGATE INFORMATION

Venue

Le Palais du Pharo / Pharo congress center
58 Boulevard Charles Livon - 13007 Marseille
<http://palaisduperharo.marseille.fr/>

Getting around Marseille

Marseille public transportation network is named RTM. There are 2 metro lines, 3 tram lines and many bus lines. Metros run from 5 am to 12:30 am and trams from around 5 am to 12 or 1 am depending on the line. There are no night buses past 12:30 am.

For more information: <http://www.rtm.fr/>

Société Française d'Ecologie

Throughout the event, SFE representatives can be found at the registration desk or at their stands in the Exhibition Hall.

Badges

For security purposes, please always wear your badge inside the Palais du Pharo and Gastaud amphitheater as well as on the Terrasse.

Refreshments

Tea and coffee will be available in Espace Vieux Port 1000 during the "coffee breaks" (see daily programme).

Lunches

Lunches will be served in Espace Vieux Port 1000 between the designated times (see daily programme).

Cloakroom

The cloakroom will be located close to the west gate (you need to go around the Auditorium, the cloakroom is behind). It will be open for the duration of the meeting but will close 30 minutes after the last event of the day.

Internet

Wifi is provided throughout the convention center.

Programme

For those who did not request the printed programme, please check the programme online on our website. You can download a PDF version there.

Electronic devices

As a courtesy to presenters and other delegates we ask the attendees to switch off their electronic devices (mobile phones and laptops) before entering any session. Seats are provided within the conference center elsewhere than in the rooms dedicated to the scientific talks.

Speaker room

The speaker room is located in the 'Galerie Voutée 1 or 2' straight behind the exhibition hall (check the map page 17) and is fully equipped for speakers to submit and review their presentations. Speakers must bring their presentations (pdf and ppt(x) formats accepted) to the room at least two hours before the beginning of the session in which they will present. Technical staff will be on hand to help with any issues. Opening hours: Tuesday 7 am - 8 pm, Wednesday 8 am - 5 pm, Thursday 8 am - 5 pm

Time zone

Marseille is GMT = + 1 hour.

First aid

Should you require first aid assistance during the conference, please contact the staff who will be able to help. If there is an emergency, call 112 immediately.

Lost property

Please hand in lost property to the Registration Desk, where it will be made available to the owner for collection.

WILEY

LIGNE POLITIQUE SFE 2016-2020

SOCIÉTÉ FRANÇAISE D'ÉCOLOGIE

Qu'est-ce que l'éologie scientifique ?

L'éologie scientifique étudie les relations entre les êtres vivants et leur environnement, et les interactions des êtres vivants entre eux. L'éologie scientifique s'intéresse à l'étude de la distribution et de l'abondance des organismes, aux liens fonctionnels qu'ils tissent entre eux, à la structure et au fonctionnement des écosystèmes qu'ils constituent, ainsi qu'aux mécanismes qui régissent la genèse, le maintien et l'évolution de la diversité des organismes.

L'éologie scientifique nous renseigne également sur les interdépendances qui relient l'être humain à l'ensemble des écosystèmes de la Terre. Grâce à une meilleure compréhension de ces liens, elle nous aide à mieux prévoir les conséquences de nos actions sur la biosphère et sur sa contribution à notre bien-être. Les observations faites en écologie éclairent donc la société dans les actions qu'elle entreprend pour préserver ce bien-être.

La Société Française d'Écologie (SFE) a été fondée en 1968. Il s'agit d'une société savante dédiée à l'éologie scientifique. Association à but non lucratif reconnue d'utilité publique, elle est membre de l'European Ecological Federation (EEF) et de l'International Association for Ecology (INTECOL).

Société Française d'Écologie : mission et vision

L'objectif de la SFE est d'encourager le développement de la discipline intégrative qu'est l'éologie scientifique sous tous ses aspects, de l'éologie évolutive à l'éologie fonctionnelle, dans des ouvertures pluridisciplinaires de tous ordres. Ses centres d'intérêt vont des aspects les plus fondamentaux aux plus finalisés.

Sa vision est celle d'un monde inspiré, informé et influencé par l'éologie scientifique. Elle se conçoit comme une société savante en dialogue avec la société. Elle reconnaît l'élégance de l'éologie scientifique en tant que source d'inspiration et vecteur de compréhension de la nature.

Sa mission est de soutenir l'acquisition de nouvelles connaissances, leur partage et leur promotion pour favoriser des actions compatibles avec les limites planétaires mises en évidences par l'éologie scientifique elle-même.

Son ambition est de représenter l'ensemble de la communauté des écologues de France, d'être un interlocuteur privilégié pour établir des actions conjointes avec d'autres sociétés et associations et, enfin, de faciliter le dialogue entre connaissances et savoirs, un échange impliquant scientifiques, gestionnaires, décideurs et usagers.

Ses valeurs sont celles d'une société savante qui, s'appuie sur des faits validés par l'analyse scientifique, se veut une force de proposition positive au bénéfice de la société, prône l'ouverture d'esprit, reste à l'écoute des idées nouvelles, est tournée vers l'avenir, s'appuie sur la diversité et est gouvernée de façon indépendante, transparente et efficace.

Priorités 2016-2020

Les cinq priorités de la SFE pour la période 2016-2020 ont été définies à partir de retours d'expériences et de discussions des membres de son Conseil d'Administration, ainsi qu'à la suite d'une large diffusion d'un questionnaire auprès des membres et sympathisants de la SFE au printemps 2015. Nos priorités sont de :

1. Favoriser la diffusion des avancées en écologie scientifique au sein de la communauté des écologues ;
2. Promouvoir l'écologie scientifique auprès de la société ;
3. Favoriser la réflexion sur les défis actuels en écologie scientifique ;
4. Favoriser l'émergence et le développement de vocations et talents dans le domaine de l'écologie scientifique ;
5. Améliorer le fonctionnement de la SFE et sa représentativité.

1. Favoriser la diffusion des avancées en écologie scientifique au sein de la communauté des écologues en :

Organisant tous les deux ans un colloque d'écologie. Plus qu'un point de rencontre entre les membres de la communauté des écologues, c'est aussi l'occasion d'établir ou de renforcer les liens avec d'autres sociétés d'écologie à travers la co-organisation de symposiums ou de rencontres, telles que le colloque BES-SFE (Lille, 2014), co-organisé avec la *British Ecological Society* (BES). Les prochains rendez-vous sont fixés à Marseille en 2016 et à Rennes en 2018.

Proposant chaque année des journées de réflexion, des conférences et des ateliers autour d'un enjeu de recherche ou environnemental important, en facilitant tout particulièrement la contribution de jeunes chercheurs à ces évènements.

Encourageant le développement de groupes thématiques qui facilitent les échanges au sein de sous-disciplines de l'écologie et permettent d'organiser des journées à thèmes sur les défis plus spécifiquement associés à ces sous-disciplines ainsi que des journées thématiques à l'interface entre sous-disciplines.

2. Promouvoir l'écologie scientifique auprès de la société en :

Diffusant des textes de vulgarisation des connaissances vers le grand public, via des textes en lignes tels que «Les regards sur la biodiversité», la diffusion de documentaires produits par ses membres, la promotion des initiatives de ses membres répartis sur toute la France et l'implication des médias régionaux et nationaux aux évènements organisés par la SFE.

Renforçant le poids de l'écologie scientifique sur les scènes médiatique et politique, via l'attribution de prix, via la mise à disposition d'une base de données d'experts pour les médias et les décideurs politiques ou via la diffusion d'appels en direction des acteurs de la société, en particulier les acteurs politiques.

Imaginant les passerelles et interfaces pour relier le monde académique à la société. Par exemple en proposant tous les 2 ans une bourse «écologie impliquée». Mais aussi en ouvrant la discussion autour de l'écologie scientifique aux gestionnaires de l'environnement (symposium dédié dans les conférences) et aux citoyens (donner du crédit aux sciences participatives).

3. Favoriser la réflexion sur les défis actuels en écologie scientifique en :

Facilitant la réflexion sur ce que ses membres perçoivent comme les grands défis de connaissance actuels en écologie scientifique.

Alimentant, grâce à ce baromètre des défis, les échanges formels et informels que nous avons avec les instances de la recherche et les porteurs d'enjeux qui définissent les politiques de recherche au service de la société.

4. Favoriser l'émergence et le développement de vocations et talents dans le domaine de l'écologie scientifique en :

Proposant le service Ecodiff pour mettre en contact offres et demandes de stages et d'emplois et annoncer les événements intéressant l'ensemble de la communauté de l'écologie scientifique française (colloques, séminaires, parutions, etc.).

Offrant à des écologues en devenir des bourses de terrain pour faciliter la réalisation de projets scientifiques personnels.

Contribuant, à travers la remise de prix, à faire connaître des parcours alliant esprit de découverte, passion et engagement dans la formation, pour qu'ils soient source d'inspiration.

Facilitant le développement de l'activité professionnelle de nos plus jeunes membres par l'organisation d'ateliers thématiques (comment mieux publier, rechercher des financements, emploi et perspectives de carrière), l'utilisation et l'adaptation des outils mis en place par *l'International Network of Next-Generation Ecologists* (INNGE) et l'implication des groupes thématiques dans l'enseignement et l'émergence des vocations.

Mettant en place des ressources/outils pédagogiques destinés aux enseignants chargés d'enseigner l'écologie scientifique à différents niveaux pour les aider à traiter des questions spécifiques liées soit à l'actualité soit à des questions fondamentales en écologie.

5. Améliorer le fonctionnement de la SFE et sa représentativité en :

Favorisant une bonne représentativité de la diversité du monde de l'écologie scientifique au sein de ses membres et de son conseil d'administration.

Encourageant une meilleure représentativité spatiale en s'appuyant sur des écologues-relais en particulier dans les différentes régions de France.

Élargissant sa base d'adhérents (personnes physiques et morales) en insistant sur l'engagement clair que constitue déjà une adhésion en tant que telle.

Sondant nos membres pour faire remonter leurs attentes et leurs suggestions pour une Société Française d'Ecologie toujours plus apte à répondre à sa mission.

Informant régulièrement l'ensemble de nos membres des activités de la SFE, de son conseil d'administration et de ses membres.

Cherchant d'autres sources de financement permettant de renforcer ses actions auprès de bailleurs publics et privés dans le respect de sa vision et de ses valeurs.

SFE AWARDS

SFE Grand Prix

Since 2009, the yearly « *SFE Grand Prix* » recognizes an ecologist for his or her lasting contribution to the content and influence of the discipline of ecology.

This year the “Grand Prix” recognizes the contribution of Pierre-Henri Gouyon, MHN professor at *the Institut de Systématique, Évolution & Biodiversité*. Pierre-Henri explored the mechanisms of evolution by integrating genetics and ecology. His theoretical work spans the whole range of mechanisms of life’s key functions (sex, mutation, dispersal, death). His work incorporates drivers acting at the different levels of biological and ecological integration (genes, individuals, metapopulations, species) and approaches the evolutionary processes by taking into account chance, selection and historical contingencies. He also developed experimental studies on plants. His constant will to put his thinking on evolution within the context of the complexity of biological interactions of genes organisms and their environment has influenced countless generations of ecologists. Pierre-Henri Gouyon has, in addition, put his deep understanding of the complexity of life at the service of a broader reflexion on the environmental challenges generated by the interaction of humans with the biosphere.

SFE Prix Recherche

Since 2013, the yearly « *SFE Prix Recherche* » recognizes the originality and breadth of the contribution of an early to mid-carrier ecologist to the advancement of ecological science.

This year this award recognizes the work of Elisa Thébault, a CNRS junior scientist at the “*Institut d’Ecologie et des Sciences de l’Environnement-Paris*”. Elisa Thébault uses models to study the numerous challenges posed by the understanding of ecological interactions in networks: impacts of losses in biodiversity on ecosystem functioning, trophic and mutualistic interactions within complex networks, land use effects on trophic networks in soils and their associated ecosystem functions and services, analysis of network topologies (e.g. pollinator and herbivore networks). Elisa has, in particular, studied the links between biodiversity and stability. The diversity and breadth of her scientific contributions focus on what is at the heart of ecology: species interactions and their effects on ecosystem functioning.

SFE Prix jeune chercheur

Fabien LAROCHE for his article "A Neutral Theory for Interpreting Correlations between Species and Genetic Diversity in Communities". 2015, American Naturalist. 185 (1).

Jonathan ROLLAND for his article "Faster speciation and reduced extinction in the tropics contribute to the mammalian latitudinal diversity gradient". 2014. Plos Biology. Vol. 12 (1): e1001775.

Sfécologie 2016 Best poster by a young researcher award

The best students posters presented during poster sessions A and B will be rewarded.

EXHIBITORS

AnaEE-France

AnaEE (Analysis and Experimentation on Ecosystems - France) is a national research infrastructure for the study of continental ecosystems and their biodiversity

BES - British Ecological Society

BES - Advancing ecology and making it count

FRB - Foundation for Research on Biodiversity & CESAB

The Foundation for Research on Biodiversity is a platform for the different scientific players and stakeholders in society concerned with biodiversity

SEOLANE

A station specialised in hosting scientific gathering and field work sessions in Ubaye

French Ecological Society

The French Ecological Society is a learned society which aims to promote and associate the ecological disciplines and to strengthen their visibility in France.

institut méditerranéen de biodiversité et d'écologie
marine et continentale

IMBE - Mediterranean Institute of marine and terrestrial Biodiversity and Ecology

IMBE is your host and is a research unit, supported by two universities (Aix-Marseille University and Avignon University) and two national research organisations (CNRS and IRD)

ANNUAL MEETING 2016

Join us in Liverpool for exceptional international science, plenary speakers, career development and networking opportunities.

We also have a social programme as packed and diverse as our scientific sessions!

Registration and abstract submission are now open.

SFÉCOLOGIE 2018 – RENNES CONFERENCE ANNOUNCEMENT

Dear Colleagues,

We are delighted to invite you to Sfécologie 2018, International Conference on Ecological Sciences, the conference of the French Ecological Society (SFÉ) that will take place in Rennes in October 2018. The conference will be held at the historic Couvent des Jacobins (<http://centre-congres-rennes.fr/>), in the old part of the city of Rennes, ensuring convenient public transportation for the attendees.

Previous successful Sfécologie meetings have been held in Montpellier (2010), Lille (2014), and Marseille (2016). This meeting will promote and support exchanges around the latest developments in research and the most exciting challenges raised from the different disciplines of ecology. Contributions will be welcome on any aspect of ecology, including focused empirical and theoretical ecological studies, to engage and strengthen fruitful collaboration and intellectual exchanges.

This 4-days conference will include a full range of academic sessions, plenary lectures, social events and field trips within and beyond Rennes.

The organizing committee
